# 1. Description of the educational program

The EP "Startup Bachelor" is focused on training highly qualified managers who have the necessary competencies to organize their own business and start-up.

The field of professional activity of graduates who have mastered the undergraduate program includes:

• management activities in organizations of any organizational and legal form, in which graduates work as executives or leaders in various departments of the management apparatus;

• entrepreneurial and organizational activities in structures where graduates are entrepreneurs who create and develop their own business;

• research activities in scientific organizations related to the solution of management problems;

The objects of professional activity of graduates who have mastered the undergraduate program are:

• management processes of organizations of various organizational and legal forms;

• public and private management processes;

• research processes.

The area of professional tasks solved by the specialist in the EP "Startup bachelor's degree" (bachelor's degree) organizational and managerial activities:

• organizing your own business and/or start-up.

• development of strategies for the development of organizations and their individual divisions;

• management of subdivisions of enterprises and organizations of different forms of ownership, state and local authorities;

• organization of creative teams (teams) to solve organizational and managerial tasks and manage them;

analytical activity:

• search, analysis and evaluation of information for the preparation and adoption of management decisions;

• analysis of existing forms of organization and management processes, development and justification of proposals for their improvement;

• assessing the effectiveness of projects, taking into account the uncertainty factor;

activity: scientific - research organization of scientific research:

• definition of tasks for groups and individual performers, selection of research tools, analysis of their results, collection, processing, analysis and systematization of information on the research topic, preparation of reviews and reports on the research topic;

• development of models of the studied processes, phenomena and objects related to the field of professional activity, evaluation and interpretation of the results obtained;

• identification and formulation of topical scientific problems;

• preparation of reviews, reports and scientific publications.

# 2. CPurpose and objectives of the educational program

**Purpose of the OP:**training of entrepreneurs with practical business skills, with a system of competencies necessary for a competitive entrepreneur, possessing analytical, research, leadership skills and innovative thinking.

## Tasks of the OP:

- to study the tasks of organizational development;
- study the methods and tools of business process engineering;

• learn how to structure and link individual tasks into integrated development programs;

• master applied tools for improving business engineering;

• to master the skills of carrying out changes in the work of the company, to overcome resistance to change;

• master the methods of evaluating the economic efficiency of a business.

# **3.** Requirements for evaluating the learning outcomes of an educational program

LO 1: Has the ability to think abstractly, analyze, synthesize, generate ideas, and conceptualize new products and services that are in demand in the market.

LO 2: Demonstrates a commitment to ethical values, has the skills of sociocultural and business communication, is able to independently find the right solutions in non-standard situations; applies knowledge of economic laws, life safety, ecology; a culture of academic integrity.

LO 3: Makes and evaluates strategic business management decisions based on personal leadership and entrepreneurial skills.

LO 4: Has a willingness to lead a team in the area of his professional activity, tolerantly perceiving social, ethnic, confessional and cultural differences.

LO 5:Shows the ability to present, defend one's position, negotiate

LO 6: Able to build a process of effective personal time management and implement a self-development trajectory based on the principles of lifelong learning.

LO 7: Develops corporate strategy, organizational development and change programs and ensures their implementation, promotes innovation to various target audiences from investors to end users.

LO 8: Uses modern financial management techniques to achieve strategic objectives.

LO 9: Develops technologies for creating biomedical equipment and organizes its production.

LO 10: Uses modern tools to introduce progressive socio-economic solutions to the market, their support, support, creation of marketing innovations that help attract and retain consumers, achieve a sustainable competitive advantage.

LO 11: Uses in professional activities various types of information and communication technologies, software tools for solving general engineering problems, modeling electrical and electronic devices.

LO 12: Demonstrates a set of process management skills, the ability to choose methods, methodologies and evaluation criteria to obtain results.

LO 13: Demonstrates the ability to constantly learn, to acquire new, expand and deepen previously acquired knowledge, skills and competencies, to work in a team of developers and users of engineering systems.

LO 14: Demonstrates basic knowledge of computer systems architecture, data warehousing, data management systems, information systems, algorithmization and programming, software development technologies, methods and models for analyzing, processing and interpreting data.

## 4. Passport of the educational program

No.	Field name	Note
1	Code and classification of the field of education	6B04 Business, administration and law
2	areas of study	6B041 Business and management
3	programs	B044 "Management and management"
4	Name of the educational program	Startup undergraduate
5	Brief description of the educational program	is focused on training highly qualified managers who have the necessary competencies to organize their own business and start-ups.
6	Purpose of the OP	training of entrepreneurs with practical business skills, with a system of competencies necessary for a competitive entrepreneur, possessing analytical, research, leadership skills and innovative thinking.
7	OP type	higher professional education
8	NQF level	6
9	ORC level	6
	Distinctive features of the OP	
eleven	List of competencies of	K 1 Generation of business and social initiatives
	1 0	K 1.1 Ability to see business opportunities and formulate a business idea
		K 1.2 Ability to develop business projects and update the business concept
		K 1.3 Ability to find and attract resources for the implementation of business projects K 1.4 Ability to assess the social, economic and technological conditions for doing business and predict business
		development scenarios

4.1.General information

K 1.5 Possession of basic knowledge of the basics of
competitive intelligence and the ability to apply them in their
activities
K 1.6 Ability to demonstrate leadership qualities in the
processes of creating and managing a business
K 1.7 Ability to create and manage a brand
K 1.8 Possession of basic knowledge of legal documents, incl.
in the field of entrepreneurship, and the ability to apply them
in their activities
K 2 Organizational and managerial activities
K 2.1 Ability to assess the human capital of business partners
and employees
K 2.2 Possession of the basics and principles of business
management
K 2.3 Possession of skills and ethics of business
communications
K 2.4 Ability to work in a group and manage subordinates
K 2.5 Ability to manage conflicts
K 2.6 Ability to organize the search, selection and work of
personnel
K 2.7 Ability to manage staff development and development
K 2.8 Possession of methods of motivation and stimulation of
personnel
K 2.9 Possession of methods for assessing the quality of
personnel work
K 2.10 Proficiency with marketing tools
K 2.11 Possession of methods and tools of operational
management
K 2.12 Knowledge of methods and tools of quality
management
K 2.13 Ability to manage distribution channels
K 2.14 Ability to find and make organizational and managerial
decisions in conditions of uncertainty, redundant information
and expanding markets, as well as take into account their
consequences
K 2.15 Ability to assess, predict risks and minimize their
consequences;
K 2.16 Proficiency with strategic management methods
K 2.17 Knowledge of innovation management methods
K 2.18 Possession of methods for developing and
implementing an investment strategy
K 2.19 Possession of basic knowledge of the foreign economic
activity of the enterprise
K 2.20 Possession of basic knowledge on the protection of
intellectual property
K 2.21 Ability to interact with financial institutions
K 2.22 Ability to manage cash flows
K 3 Information and analytical activities
K 3.1 Possession of methods of quantitative analysis and
modeling, theoretical and experimental research
K 3.2 Computer skills and the ability to use application
programs in the process of creating and managing a business
programs in the process of creating and managing a busiliess

	1	
		K 3.3 Ability to identify and assess economic trends, market
		trends and market gaps
		K 3.4 Ability to assess the economic system in the internal and
		external environments of the enterprise
		K 3.5 Ability to manage knowledge within the implemented
		entrepreneurial field of activity
		K 4 Settlement and economic activity
		K 4.1 Possession of basic economic knowledge
		K 4.2 Possession of the basics of money circulation
		K 4.3 Proficiency in accounting methods
		K 4.4 Possession of methods and tools of financial
		management $V_{4,5}$ Declaration $V_{4,5}$ is methods for accessing and managing
		K 4.5 Proficiency in methods for assessing and managing
		business value
		K 5 Production and technological activities
		K 5.1 Ability to manage documents using modern information
		technologies
		K 5.2 Ability to manage product life cycle
		K 5.3 Ability to design and organize the production of products
		K 5.4 Ability to plan and manage production
		K 5.5 Ability to allocate and manage production and
		technological resources
		K 5.6 Ability to plan and conduct product testing
		K 5.7 Ability to certify products and production
		K 5.8 Ability to understand (foresee) the environmental
		consequences of project implementation, develop measures to
		reduce possible environmental risks
12	Learning outcomes of the	LO 1: Has the ability to think abstractly, analyze, synthesize,
	educational program:	generate ideas, and conceptualize new products and services
		that are in demand in the market.
		LO 2: Demonstrates a commitment to ethical values, has the
		skills of socio-cultural and business communication, is able
		to independently find the right solutions in non-standard
		situations; applies knowledge of economic laws, life safety,
		ecology; a culture of academic integrity.
		LO 3: Makes and evaluates strategic business management
		decisions based on personal leadership and entrepreneurial
		skills.
		LO 4: Has a willingness to lead a team in the area of his
		professional activity, tolerantly perceiving social, ethnic,
		confessional and cultural differences.
		LO 5:Shows the ability to present, defend one's position,
		negotiate
		LO 6: Able to build a process of effective personal time
1		management and implement a self-development trajectory
		based on the principles of lifelong learning.
		based on the principles of lifelong learning.

		implementation, promotes innovation to various target
		audiences from investors to end users.
		LO 8: Uses modern financial management techniques to
		0 1
		achieve strategic objectives.
		LO 9: Develops technologies for creating biomedical
		equipment and organizes its production.
		LO 10: Uses modern tools to introduce progressive socio-
		economic solutions to the market, their support, support,
		creation of marketing innovations that help attract and retain
		consumers, achieve a sustainable competitive advantage.
		LO 11: Uses in professional activities various types of
		information and communication technologies, software tools
		for solving general engineering problems, modeling electrical
		and electronic devices.
		LO 12: Demonstrates a set of process management skills, the
		ability to choose methods, methodologies and evaluation
		criteria to obtain results.
		LO 13: Demonstrates the ability to constantly learn, to
		acquire new, expand and deepen previously acquired
		knowledge, skills and competencies, to work in a team of
		developers and users of engineering systems.
		LO 14: Demonstrates basic knowledge of computer systems
		architecture, data warehousing, data management systems,
		information systems, algorithmization and programming,
		software development technologies, methods and models for analyzing, processing and interpreting data.
13	Form of study	full-time
13	Training period	4 years
15	Volume of loans	240

9	Fundamentals of anti-corruption culture	Studying the basis of anti- corruption culture, system, methods, principles of forming the basis of anti- corruption culture.	5		v									
10	Fundamentals of Entrepreneurship and Leadership	The purpose of the discipline: the study, systematization and consolidation of the foundations of the theory and practice of entrepreneurial activity in modern economic conditions; familiarization of students with the mechanism of work of business entities; obtaining a comprehensive understanding of the methodology of entrepreneurship.	5	v		v	v							
eleven	Fundamentals of scientific research methods	The purpose of studying the discipline is, on the basis of theoretical and practical knowledge, to ensure the adoption of evidence-based decisions in the performance of professional tasks.	5		v	v								

12	Ecology and life safety	The purpose of studying the discipline is to form the foundations of environmental knowledge, which is the theoretical foundation of all environmental protection measures, including measures to ensure the environmental safety of a person, preserve his health, ecologization of consciousness and education of ecological culture.	5		v									
						sic dis y comp								
12	Mathematics for	The source is intended for	5		versity	com	onen	L						
13	Mathematics for Economists	The course is intended for students studying economics. It aims to teach the methods of differential and integral calculus used to build mathematical models of various economic and financial disciplines, including banking, management, accounting.	5	v							v			
14	business statistics	The purpose of the discipline is to acquire by students the necessary skills to apply the methods of quantitative statistical analysis in various economic situations and business processes. The study of the discipline	5	v								v	Y	
15	Introduction to the specialty	The study of the discipline "Introduction to the specialty" is necessary to familiarize students with their future profession and encourage them to master the	5										v	

		necessary knowledge and skills, as well as to familiarize students with the specifics of university education and the graduating department.										
16	Engineering and computer graphics	The course develops the following skills for students: depict all possible combinations of geometric shapes on a plane, conduct research and measure them, allowing image transformations; create technical drawings, which are the main and reliable means of information providing communication between the designer and the designer, technologist, builder, in the AutoCAD environment.	5									
17	The psychology of entrepreneurship	The purpose of the discipline is the formation of students' skills and abilities of socio- psychological analysis of problems in the areas of business and interpersonal relations, the use of acquired knowledge in practical work in the field of business, instilling in students an interest in research work, awareness of its social significance, the formation of adequate ideas among students about their abilities	5		V	v	v				v	

		to do business and about the psychological factors of success in the business sphere.									
18	Business management	The purpose of studying the discipline is to master the theoretical foundations and the mechanism of business functioning, as well as gaining practical skills in business management tools and managerial decision-making, studying the main directions, activities, projects that form the appropriate policy of the organization.	5								
19	Microeconomics	The purpose of studying the discipline is the formation of future specialists' theoretical knowledge about the microeconomic aspects of the functioning and development of the modern economy, as well as practical skills in the field of microeconomic analysis and other modern scientific tools for studying microeconomic processes.	5				v			v	

20	Macroeconomics	The purpose of studying the discipline is to give students knowledge about macroeconomics as an integral system that studies the functioning and development of the country's national economy, analyzes the most pressing problems of the economy, the impact of the state's economic policy on the economic life of society.	5				v			v	
21	Business engineering 1	In the system of economic education, the course contributes to the formation of modern economic thinking of a specialist focused on the application of an engineering approach to solving practical problems of enterprises by creating and using enterprise architecture models.	5								
22	Theories for inventive problem solving	An idea of the trends in the development of methods for solving inventive problems, of a creative approach in solving problems, of the essence and types of contradictions, of methods for resolving contradictions in technical systems, in particular electronic engineering.	6								

23	Analysis of the competitive environment and competitors	The purpose of the discipline is to study the modern theory of competition, mastering the practical skills of organizing and analyzing the activities of competitors; analysis of the company's competitive environment; comparative analysis of competitors' activities.	5		v	V		v		V		
24	Accounting and audit	The purpose of the discipline is to familiarize students with the basic principles and methods of accounting and auditing, as well as the possibilities of their application in solving problems that arise in their subsequent professional activities.	5						v			
25	Communication skills	The discipline is dedicated to a block of professional competencies of a manager related to communication. The purpose of the discipline: the formation of a versatile understanding of business communication among students, as well as the development of a number of communicative competencies of a leader.	5				v					
26	Fundamentals of agile technologies	The purpose of the discipline is the development of skills and practical skills for effective project management, ensuring the	5		v			v				

27	Theory and practice of project management	achievement of certain results in terms of the composition and scope of work, cost, time, quality and satisfaction of project participants. The goal is to acquire by students knowledge in the field of theory and practice necessary for project management.	5			v				v					
28	Finance and investment	The study of the discipline aims to develop students' theoretical knowledge and practical skills in the field of finance and investment activities.	5								v				
		Cycl	e of b	asic di	iscipli	nes O	ptiona	l com	onent	,					
29	Introduction to the specialty - Computer Science	The course studies the main trends in the development of the field of computer science, its history, features of problems and methods for solving them, and also teaches the first skills of working with a computer, introduces basic terminology, promising trends in the development of information technology, basic concepts of algorithmization and programming.	5											v	v
thirty	Introduction to Electronic Science and Engineering Technology	The course gives an idea of the trends in the development of electronic industry technologies, the patterns of	5										v	v	

		their development, which determine the relationship between the quality indicators of the element base, performance parameters, and energy consumption indicators of electronic systems. Introduces students to the methods and fundamentals of electronic science and engineering; with the basic concepts, models and principles of building the electronics industry.									
31	Business engineering 2	The purpose of the discipline is to form a system of practical knowledge and skills in students in the field of design, business process management, their improvement and redesign in order to increase efficiency.			v		v				
32	Fundamentals of electromechanics and electronics	The course is aimed at developing students' knowledge of the basics of electromechanics and electronics, design methods and calculations of electronic devices. Obtaining knowledge, skills and abilities to read structural and schematic diagrams of electronic devices, understand the principles of their operation and make the	5						V	v	

		right choice of elements of electronic equipment.									
33	Algorithmization and basics of programming	Introducing students to the basic principles of developing and analyzing algorithms and data structures and high-level programming languages and acquiring skills in designing and programming computer applications.	5							v	v
34	Theoretical foundations of electrical engineering	The discipline deals with: basic concepts and definitions used in electrical engineering; modern methods of modeling electromagnetic processes; methods of analysis of electrical and magnetic circuits; numerical methods for the analysis of electrical circuits; basic laws and principles of electrical engineering, properties and characteristics of electrical circuits; methods for analyzing electrical circuits in steady state and transient modes; selection of the	5						V		

		optimal calculation method, determine the main parameters and characteristics of electrical circuits								
35	Biomedical electronics	The discipline "Biomedical Electronics" refers to the profiling cycle as one of the fundamental sciences in the field of electronics, associated with the concept of obtaining information, its processing and transmission. On the basis of electrical devices, electrical transducers (sensors), elements of diagnostic and physiotherapeutic equipment used in clinical medicine are based.	5				V

		various problems, using												
		analog-to-digital and digital-												
		to-analog converters.												
48	Methods for	The objectives of mastering	5							v				
	processing and	the academic discipline												
	analyzing	"Methods of processing												
	biomedical signals	biomedical signals and data"												
	and data	are: formation of a system of												

		views among students on the correct use of existing mathematical methods and algorithms for analyzing experimental information of various physical nature; creation of software- algorithmic and mathematical support for automated primary processing of biomedical signals; development of medical and technical requirements for the creation of new and improvement of existing medical devices and systems, designs, programs and methods for their testing.									
49	CRM systems	The course studies the basic concepts, categories and tools of modern CRM, the technical aspects of CRM systems, the features of the choice and integration of software products used in CRM projects, the basics of the work of analytical models for analyzing and predicting customer behavior. A special feature is its practical focus on studying examples of developing strategies and tools for managing customer relationships, as well as implementing CRM implementation projects in various industries.	5		V		v		v		

, ,		1									
50	Development of computer games	The course is devoted to the main methods of developing computer games, developing documentation and implementing independent game projects. The course begins with a description of the general ideas of computer game development, game documentation. The first deals with the creation of two-dimensional games, using their example to explore concepts that are fair for any kind of games, the second is focused on working with three-dimensional graphics. Both blocks end with an analysis of a fairly large-scale game project that demonstrates the interaction of technologies studied earlier.	5								V
51	3D printing of machine parts and elements	When compiling the program for this course, the following goals were taken into account: to familiarize students with the classification of additive technologies, to provide general information about the main types of AM technologies, manufacturers of AM machines, development trends and examples of the practical use of AM technologies in industry.	5						V	V	

52	Artificial intelligence and expert systems	The discipline includes consideration of the main issues of modern theory and practice of building intelligent and expert systems, including neural networks, error backpropagation, LISP and Prolog programming languages, programming mathematical formulas in C ++.	5							V	V
53	Basics of cybersecurity	To give a general idea of security in the information society and, on this basis, to form an understanding of information security technologies and the ability to apply cybersecurity rules in all areas of activity	5								V
54	The device of sensors and actuators of electromechanical and electronic systems of vehicles	In the process of studying the course, the following are considered: design features of modern electronic vehicle control systems; designs of specialized vehicle onboard systems; Automotive multiplex information transmission systems. The designs of hybrid electric vehicles, the operation of sensors in automotive electronic systems are being studied.	5						v		
55	Inspection and testing of medical equipment	The discipline "Inspection and testing of medical equipment" is aimed at	5					v			

i i	1	1 1 1 1	ı ı	1	1	1	l .	 1	I	1		l I		I	1 1
		developing students'													
		knowledge about the													
		operation and maintenance of													
		medical devices, biotechnical													
		systems and devices in the													
		conditions of medical and													
		biological organizations,													
		teaching the principles of													
		ensuring conditions for safe													
		life in the development,													
		production and operation of													
		biomedical devices,													
		complexes and systems,													
		training in methods of													
		application of methods for													
		organizing routine													
		maintenance, verification													
		and certification of medical													
		equipment.													
56	SMM	The purpose of the discipline	5												
		is to form students'													
		fundamental understanding													
		of social media marketing													
		(SMM) with the possibility													
		of applying the acquired													
		knowledge and skills in the													
		activities of digital agencies													
		and digital divisions of													
		companies.													
57	Product	The purpose of the discipline	5				v		v						
	Management	is the formation of students'													
	C	theoretical knowledge,													
		practical skills and													
		competencies necessary for													
		the effective implementation													
		of product management													
		tasks. and services in the													

		positions of marketing manager, brand manager.									
58	Lean management	The discipline studies the basics of the formation of a value stream by qualified employees in Lean management; key aspects, implementation algorithms, Lean management models; the concept of stimulating production according to the basics, Lean management; ways and methods of introducing and developing Lean management in accordance with the synchronization of continuous improvement of the company's activities.	5		v		v		v		
59	Operational efficiency	The purpose of the discipline is to form students' holistic understanding of approaches to improving operational efficiency in organizations with various types of production processes based on a systematic approach.	5		v		v		V		
60	Oratory	Discipline Oratory is aimed at the formation and development of practical skills of public speaking. During the course, students	5			v					

I	1	will loom the bost of	1	1	I	1	1	1	i –	1	I	1	I	1	1	1	
		will learn the basics of															
		oratory, the history of the															
		issue, existing theories and															
		techniques.	_														
61	Emotional intellect	The purpose of studying the	5				v	v	v								
		discipline "Emotional															
		Intelligence" is to develop															
		students' theoretical and															
		practical knowledge, skills															
		and abilities of emotional															
		competence in the															
		management of value chains,															
		as well as the formation of															
		emotionally competent															
		behavior necessary for the															
		professional activity of a															
		high-level specialist based on															
		the consideration of the															
		emotional factor in business															
		processes modern															
		companies.															
62	Taxes and taxation	The purpose of mastering the	5								v						
		discipline "Taxes and															
		Taxation" is the acquisition															
		of theoretical knowledge in															
		the field of tax planning, the															
		acquisition, development and															
		consolidation of skills and															
		abilities in applying tax															
		planning methods in															
		companies and financial															
		institutions, calculating tax															
		savings, as well as the															
		formation of systemic and															
		professional competencies.															

63		The purpose of mastering the discipline is to form a solid theoretical and practical basis for understanding the economic mechanism of tax planning, as well as instilling practical skills in assessing tax risks.	5				v			
64	Personnel management and team building	The main goal of the discipline is to study and assimilate by students the theoretical foundations and practical skills of managing project groups, teams and teams. Knowledge of the theory and methods of team management is necessary for the successful implementation of innovative projects, effective management of teams of small enterprises, departments of large companies.	5		V					
65	Motivation and stimulation of personnel work	The purpose of the discipline	5		v					

66	Investment management	The purpose of mastering the discipline is to study the basics of investment analysis, to obtain basic skills for evaluating the effectiveness of investment projects, to acquire knowledge in the field of evaluating the effectiveness of investment projects based on discounted cash flows.						v			
67	Financial business strategies	The discipline is a course in which students will be able to get acquainted with various business strategies for applying financial technologies in the activities of traditional and innovative financial companies, as well as non-financial firms.	5					v			
68	Capstone project 1	The course will allow students to learn how to transform an idea into a concrete solution and determine the most optimal approach to its implementation. Course participants will gain a holistic understanding of the process, key techniques and tools needed to design, develop and further develop their products and services.	4	v						V	

69	MVP Prototype	The purpose of the discipline	4	v		ļ		ļ					v	
	Development	is to help the student develop												
	r	his own MVP (minimum												
		viable product) to test market												
		demand without large												
		investments. As a result, the												
		student will be able to												
		quickly bring a product to												
		market, identify a problem,												
		analyze the target audience,												
		market and competitors,												
		develop critical functionality												
		and receive first feedback												
		from users, develop concepts												
		aimed at reducing costs and												
		making a profit on later												
		versions of the product												
		solution.												
70	Capstone project 2	The course is aimed at												
		solving the problems of												
		scaling your business and												
		attracting investments. The												
		purpose of the course is to												
		develop students'												
		understanding of the process												
		of attracting investments and												
		scaling a business, and to												
		develop practical skills in the												
		field of attracting												
		investments in a startup.											 	 
71	Sales technologies	The objectives of mastering								v		v		
		the discipline are the training												
		of specialists who own the												
		system of knowledge about												
		sales and the formation of												
		students' practical skills in												
		planning, organizing and												

mana	ging the marketing					
activ	ties of an enterprise; as					
well	as informing students					
about	the mechanism of sales					
techn	ologies for a product or
