1 Description of educational program

A doctoral student in the field of training "Digitalization of engineering manufacturing" should be prepared to solve professional tasks in accordance with the profile orientation of the doctoral program and types of professional activity:

design and engineering activities:

- analysis of the state of the scientific and technical problem and determination of the goals and objectives of the design of instrument systems based on the study of world experience;
- making decisions based on the results of calculations on projects and the results of technical and economic and functional cost analysis of the effectiveness of the designed engineering systems; production and technological activities:
- development of methods for conducting theoretical and experimental research on the analysis, synthesis and optimization of the characteristics of materials used in mechanical engineering;
- solving economic and organizational problems of technological preparation of production of machine systems and the choice of systems to ensure environmental safety of production;

research activities:

- the construction of mathematical models for the analysis and optimization of research objects, the choice of a numerical method for their modeling or the development of a new algorithm for solving the problem;
- development and optimization of field experimental studies of machine systems, taking into account the criteria of their reliability;
- preparation of scientific and technical reports, reviews, publications based on the results of the research carried out;
- application of the results of research activities and the use of intellectual property rights;

organizational and managerial activities:

- finding optimal solutions when creating high-tech products, taking into account the requirements of quality, cost, deadlines, competitiveness, life safety, as well as environmental safety;
- support of a unified information space for enterprise planning and management at all stages of the life cycle of manufactured products;
- development of plans and programs for the organization of innovative activities at the enterprise.
- deep knowledge and understanding of fundamental phenomena in their field of science.

scientific and pedagogical activity:

- participation in the development of programs of academic disciplines and courses based on the study of pedagogical, scientific, technical and scientific-methodical literature, as well as the results of their own professional activities;
 - participation in the formulation and modernization of individual laboratory work and workshops in professional disciplines;

- conducting training sessions with students, participating in the organization and management of their practical and research work;
- application and development of new educational technologies, including computer and distance learning systems.

Based on the theoretical and practical knowledge obtained, a doctoral student of technical sciences under the educational program 8D07111 – "Digitalization of machine-building production" forms professional competencies and must: have an idea of:

- the main stages of development and change of technological patterns in science and technology;
- on the subject, ideological and methodological specifics of the natural (social, humanitarian, economic) sciences;
- about scientific schools of the relevant branch of knowledge, their theoretical and practical developments;
 - about scientific concepts of world and Kazakh science in the relevant field;
- on the mechanism of implementation of scientific developments in practical activities;
 - on the norms of interaction in the scientific community;
 - about the pedagogical and scientific ethics of a research scientist; *know and understand:*
- current trends, trends and patterns of development of Russian science in the context of globalization and internationalization;
 - methodology of scientific knowledge;
 - achievements of world and Kazakh science in the relevant field;
 - (to realize and accept) the social responsibility of science and education;
- perfect foreign language for scientific communication and international cooperation;

be able to:

- to organize, plan and implement the process of scientific research;
- analyze, evaluate and compare various theoretical concepts in the field of research and draw conclusions;
 - analyze and process information from various sources;
- conduct independent scientific research, characterized by academic integrity, based on modern theories and methods of analysis;
- generate your own new scientific ideas, communicate your knowledge and ideas to the scientific community, expanding the boundaries of scientific knowledge;
 - to choose and effectively use modern research methodology;
 - plan and predict your further professional development; *have skills:*
- critical analysis, evaluation and comparison of various scientific theories and ideas;
 - analytical and experimental scientific activities;
 - planning and forecasting of research results;
 - public speaking and public speaking at international scientific forums,

conferences and seminars;

- scientific writing and scientific communication;
- planning, coordination and implementation of scientific research processes;
- a systematic understanding of the field of study and demonstrate the quality and effectiveness of the selected scientific methods;
- participation in scientific events, fundamental scientific domestic and international projects;
 - leadership management and team management;
- responsible and creative attitude to scientific and scientific-pedagogical activity;
- conducting patent search and experience in the transfer of scientific information using modern information and innovative technologies;
- protection of intellectual property rights to scientific discoveries and developments;
 - free communication in a foreign language;

be competent:

- in the field of scientific and scientific-pedagogical activity in the conditions of rapid updating and growth of information flows;
 - in carrying out theoretical and experimental scientific research;
- in the formulation and solution of theoretical and applied problems in scientific research;
- to conduct a professional and comprehensive analysis of problems in the relevant

field:

- in matters of interpersonal communication and human resource management;
 - in matters of university training of specialists;
 - in the examination of scientific projects and research;
 - in ensuring continuous professional growth.

2 The purpose and objectives of additional educational program

EP purpose:

Training of competitive, qualified personnel with high spiritual and moral qualities, ready to solve scientific and design, research, scientific and pedagogical problems in the conditions of digitalization of the machine-building complex.

EP tasks:

- preparation of a scientific and pedagogical specialist for continuous selfimprovement and self-development, mastering new knowledge, skills and abilities in innovative areas of digitalization of machine-building production;
- preparation of doctoral students for a successful career in the field of digitalization of machine-building production, private, public and public organizations, educational institutions, through teaching disciplines that will

provide the profile knowledge, tools, skills and skills necessary in a competitive environment;

- training of scientific and pedagogical personnel, based on the diversity and dynamism of the catalog of elective disciplines of the curriculum, with a predominance of practical skills in competencies, capable of performing professional functions within one or more types of activities based on the final results of training, taking into account the specifics of these activities, market requirements for organizational management, professional competencies;
- training of scientific and pedagogical personnel as a competitive specialist in the field of digitalization of machine-building production that meets international standards and allows Kazakhstan to integrate into the global educational space.

3 Requirements for evaluating the learning outcomes of an educational program

As a result of mastering the EP modules, students develop the knowledge, skills and abilities necessary to carry out all types of professional activities in the field of mechanical engineering, develop training skills to carry out further training with a high degree of independence, that is, the formation of professional, communication and key competencies that meet the requirements of employers. Qualification awarded to the graduate Doctor of Philosophy PhD in EP 8D07111 – "Digitalization of engineering manufacturing"

4 Passport of the educational program

4.1 General information

| | 4.1 General information | | | | | | |

| | | | Cycle of basic disciplin University componen | | | | | | | l | l |
| 1 | Academic writing | The course is aimed at developing academic writing skills and writing strategies for doctoral students in the field of engineering and natural sciences. The course focuses on the basics and general principles of academic writing for; writing effective sentences and paragraphs; using tenses in scientific literature, as well as styles and punctuation; writing abstracts, introductions, conclusions, discussions, conclusions, literature and resources used; quoting in the text; preventing plagiarism, and making presentations at a conference. | | V | | | | | | | |
| 2 | Research methods | The course contributes to the formation of knowledge about scientific research, methods and methodology of scientific research, methods of collecting and processing scientific data, principles of organization of scientific research, methodological features of modern science, ways of development of science and scientific research, the role of technical sciences, computer science and engineering research in modern science. The discipline examines the structure of technical sciences, the application of general scientific, philosophical and special methods of scientific research in theory and in practice. | | | V | | | | | | |
| | | | Cycle of basic disciplin Elective component | ies | | | | | | | |
| 3 | Virtual Manufacturing | The course is aimed at developing theoretical knowledge and practical skills in the field of virtual (VR) and augmented (AR) reality technologies. The discipline studies the history of technology development; the scope of Yet Another Reality (Another Reality); market development trends, presentation of analytical materials on the AR/VR market. Gadgets, varieties and features; analysis of existing devices for demonstrating realities; platforms and software; features of projects with augmented and virtual reality technologies. | 5 | | | | | | | V | |
| 4 | Advanced Digita Factory | The course is aimed at forming a system of knowledge in the field of new business models, business processes and technologies in all high-tech industries. The discipline studies the history, causes and consequences of industrial revolutions, global initiatives and programs aimed at the development of Industry 4.0.; modern information technologies, digital platforms for development and | | | | | V | | | | |
