1. Description of the educational program

The educational program (hereinafter, EP) is a set of documents developed by the Kazakh National Research Technical University named after K.I. Satpayev and approved by the Ministry of Education and Science of the Republic of Kazakhstan. The EP takes into account the needs of the labor market, the requirements of economic sectors and is based on the state educational standard for higher professional education in the relevant field.

The EP determines program educational goals, student learning outcomes, necessary conditions, content and technologies for the implementation of the educational process, assessment and analysis of the quality of students during training and after graduation.

The EP includes the curriculum, discipline content, learning outcomes, and other materials to ensure quality education for students.

2. Purpose and objectives of the educational program

EP purpose: The purpose of the educational program is to train specialists who are in demand in the oil and gas industry, who have the necessary basic competencies in the field of design and operation of main pipelines and oil and gas storage facilities.

EP objectives:

- 1. Assisting students, teachers and industry experts in understanding the structure of the educational process;
- 2. Demonstration of the formation of the necessary core competencies after completion of the undergraduate program by students;
- 3. Establishing a common framework for the feasibility and necessity of the Backbone Networks and Infrastructure training program for all stakeholders, both public and private.

3. Requirements for assessing learning outcomes of an educational program

The educational program has been developed in accordance with the State

Mandatory Standards of Higher and Postgraduate Education, approved by Order No. 2 of the Minister of Science and Higher Education of the Republic of Kazakhstan dated July 20, 2022 (registered in the Register of State Registration of Normative Legal Acts under No. 28916) and reflects the learning outcomes on the basis of which curricula are developed (working curricula, individual curricula of students) and working curricula in disciplines (syllabuses).

The assessment of learning outcomes is carried out according to the developed test tasks within the framework of the educational program in accordance with the requirements of the state mandatory standard of higher and postgraduate education.

When evaluating learning outcomes, uniform conditions and equal opportunities are created for students to demonstrate their knowledge, skills and abilities.

4. Passport of the educational program

4.1. General information

No	Field name	Note
		6B07 «Engineering,
	of education	Manufacturing and Civil
		engineering»
	Code and classification of direction of personnel training	6B071 «Engineering and engineering trades»
3	Group of educational programs	B165 «Transmission system and infrastructure»
4	Name of educational program	6B07126 «Transmission networks and infrastructure»
5		The educational program «Transmission system and infrastructure» is aimed at training specialists in the field of transportation of oil, gas and other liquid resources through pipelines. The program provides for the study of a wide range of subjects from fundamental sciences (mathematics, physics, geology, chemistry) to the principles of engineering analysis, design and management, includes the disciplines of design, design and operation of main oil pipelines, oil and gas storage facilities, ensuring flow during transportation. The subjects of professional activity of the EP are field, main and technological pipelines; pumping and compressor stations; reservoirs for storing hydrocarbons.
6	EP purpose	The purpose of the educational program is to train specialists who are in demand in the oil and gas industry, who have the necessary basic competencies in the field of design and operation of main pipelines and oil and gas storage facilities.
7	EP type	New EP
8	Level on NQF	6
9	Level on SQF	6
10	Distinctive features of the EP	The EP was developed in partnership with the Industrial Advisory Council, which includes global energy companies - Chevron, Eni and Shell, as well as together with the academic partner Colorado School of Mines (USA) for training highly qualified personnel for the oil and gas industry.
11		

		Russian and foreign languages; apply the
		basics of the legal system and legislation of the
		Republic of Kazakhstan and international
		experience in the oil and gas field; use the
		basic patterns and regulatory forms of
		interpersonal and partnership relations;
		3. Is able to apply the achievements of
		science and technology of the oil and gas
		industry to solve engineering, environmental
		and economic problems that have arisen in the
		course of professional activity;
		4. Has the skills to read normative, estimate,
		design and technical documentation and
		standards, is able to independently develop
		technical documentation;
		5. Understands the impact of technical
		solutions in the global, economic,
		environmental and social context; uses
		methods, skills and modern engineering tools
		necessary for professional practice;
		6. Is able to combine theory and practice of
		solving design and engineering problems; is
		able to independently identify, formulate and
		solve technical problems;
		7. Has basic knowledge in the field of design
		and operation of oil storage facilities and
		pipelines, contributing to the formation of a
		professional with a broad outlook;
		8. Is able to use modern equipment, use
		information technologies in the field of
		professional activity;
		9. Understands modern technical and
		economic problems; has the skills to
		independently obtain information about
		modern engineering achievements and their
		application in practice;
		10. Able to participate in the installation and
		commissioning during testing and
		commissioning during testing and commissioning of new technological
		equipment. He is able to check the technical
		condition and the residual resource of
		technological equipment, to carry out
		equipment diagnostics;
		11. Having the skills of designing and
		conducting experiments, is able to analyze and
		interpret experimental data.

1	Foreign language	English is a compulsary subject. According to the results of placement test or IELTS score, students are placed into groups and disciplines. The name of the discipline corresponds to the level of English. When passing from level to level, prerequisites and postrequisites are	10				V		v	V	v			
2	Kazakh (Russian) language	respected. Kazakh (Russian) language In this course author considers socio-political, socio-cultural spheres of communication and functional styles of the modern kazakh (russian) language. The course covers the specifics of the scientific style to develop and activate professional communication skills and abilities of students. Also it allows students to leavn the basics of scientific style practically and develop the ability of production structural and semantic text analysis.	10				V		V		V	V		
3	Physical Culture	The purpose of the discipline is to master the forms and methods of					V		V		V		v	v

	1	T. T		T	1	1		1	, ,	
		forming a healthy lifestyle within the framework of the professional education system. Familiarization with the natural-scientific basics of physical education, knowledge of modern health-improving technologies, basic methods of independent physical education and sports. As part of the course, the student will master the rules of								
4	Information and Communication technology	judging in all sports. The aim of the course is to gain theoretical knowledge in information processing, the latest information technologies, local and global networks, the methods of information protection; Getting the right use of text editor editors and tabulators; creation of base and different categories of applications.	5		v	V	V	V		
5	History of Kazakhstan	The purpose of the discipline is to provide objective historical knowledge about the main stages of the history of Kazakhstan from ancient times to the present day; introduce students to the problems of the formation and development of statehood and historical and cultural processes; contribute to the formation of humanistic values and patriotic feelings in the student; teach the student to use the acquired historical knowledge in educational, professional and everyday life; evaluate the role of Kazakhstan in world history.	5		V	V	V	V		

6	Philosophy	The purpose of the discipline is to teach students the theoretical foundations of philosophy as a way of knowing and spiritually mastering the world; developing their interest in fundamental knowledge, stimulating the need for philosophical assessments of historical events and facts of reality, assimilating the idea of the unity of the world historical and cultural process while recognizing the diversity of their skills in applying philosophical and general scientific methods in professional activities.	5		V	v		V	V	
7	Module of socio-political knowledge (sociology, political science)	The objectives of the disciplines are to provide students with explanations on the sociological analysis of society, about social communities and personality, factors and patterns of social development, forms of interaction, types and directions of social processes, forms of regulation of social behavior, as well as primary political knowledge that will serve as a theoretical basis for understanding social -political processes, for the formation of political culture, development of a personal position and a clearer understanding of the extent of one's responsibility; help to master the political, legal, moral, ethical and socio-cultural norms necessary to act in the interests of society,	3	V		*	<			

		form personal responsibility and									
		achieve personal success.									
8	Module of socio-political knowledge (cultural studies, psychology)	The purpose of the disciplines is to study the real processes of cultural creative activity of people who create material and spiritual values, identify the main trends and patterns of cultural development, changes in cultural eras, methods and styles, their role in the formation of man and the development of society, as well as master psychological knowledge for the effective organization of interpersonal interaction, social adaptation in the field of their professional activities.	5				V	V	V	V

		Election Cor	_								
1	Fundamentals of anti-corruption culture and law	The course introduces students to the improvement of socio- economic relations of Kazakhstan society, psychological features of corrupt behavior. Special attention is paid to the formation of an anti- corruption culture, legal responsibility for acts of corruption in various spheres. The purpose of studying the discipline «Fundamentals of anti-corruption culture and law» is to increase public and individual legal awareness and legal culture of students, as well as the formation of a knowledge system and a civic position on combating corruption as an antisocial phenomenon.	5		V	v	v				

				 1	1	1		1	г	-
		Expected results: to realize the values of moral consciousness and follow moral norms in everyday practice; to work on improving the level of moral and legal culture; to use spiritual and moral								
2	Fundamentals of scientific research methods	Introduction. Science and scientific thinking. Basic concepts. The main categories of science. Science as a system of knowledge. Fact, hypothesis, theory, con-cept. Methodology, method, methodology. Scientific research. Technology of research work. Stages of scientific research. Technology of working with scientific literature. Presentation of research results. System approach, system thinking, system analysis. General logical methods of research. Organization of scientific activity and scientific re-search. Implementation of the results of scientific research. Economic efficients.	5	v			v			
3	Fundamentals of economics and entrepreneurship	ciency of scientific research. Discipline studies the foundations of economics and entrepreneurial activity from the point of view of science and law; features, problematic aspects and development prospects; the theory and practice of entrepreneurship as a system of economic and organizational relations of business structures; The readiness of entrepreneurs for innovative	5	v		V	v			

		susceptibility. The discipline reveals the content of entrepreneurial activity, the stages of career, qualities, competencies and responsibility of the entrepreneur, theoretical and practical business planning and economic examination of business ideas, as well as the analysis of the risks of innovative development, the introduction of new technologies and technological solutions.						
4	Ecology and life safety	The discipline studies the tasks of ecology as a science, environmental terms, the laws of the functioning of natural systems and aspects of environmental safety in the conditions of labor activity. Monitoring of the environment and management in the field of its safety. Sources of pollution of atmospheric air, surface, groundwater, soil and ways to solve environmental problems; life safety in the technosphere; natural and manmade emergencies	5	V	v			
		Cycle of basic d						
		University con	nponent					
1	Introduction to major	Introduction to basic concepts of petroleum engineering, including drilling and completion of wells, petroleum reservoir engineering, production engineering, surface gathering and treatment, and transportation and storage.	4			v	v	

2	Computational fluid dynamics for petroleum engineering	The course discusses the basics and methods of modeling the behavior of fluid in reservoirs, perforation zones near wellbores and wells. Also, use computational methods to predict problems during transportation and cleaning of gas wells is covered.	5					V	V		
3	Geodesy with the basics of topography	The purpose of the discipline is to study the main tasks of the concept and definition of geodesy, the appearance of the relief, its display on maps and plans, solving the problems of topographic maps and plans, azimuths, directional angles, points, direct and reverse geodetic problems, types and methods of leveling. The discipline studies ways to create new plans for a geodetic network, specialized surveying, an overview of geodetic surveys, general information about plans to support new and highaltitude networks, ways to create a justification for shooting, an image of the earth's surface in a plane.	5				v				v
4	Soil Science and Soil Mechanics	The purpose of the course of teaching the discipline is to familiarize future specialists with the basics of engineering geology, soil mechanics, general provisions of modern methods of calculation, design and construction of foundations, foundations and underground structures. Related to the design, construction and operation of buildings and	5	v		v				v	

		structures, the installation of underground utilities, laying pipelines. Soil mechanics studies the problems of stress-strain state, strength, deformability and stability of soil massifs and determines the conditions for their use as the foundations of construction objects.									
5	Diagnostics and testing of oil and gas facilities	The discipline studies the basic methods and models for diagnosing oil and gas objects. Also considers testing by statistical and dynamic methods in order to assess the characteristics of objects.	6					v	v	v	
6	Engineering geology	The purpose of the course: the acquisition of theoretical knowledge about the engineering-geological features and properties of rocks, geological and engineering-geological processes occurring in these rocks, engineering-geological conditions of various territories, the study of which is necessary to predict their changes during economic development. Geotechnical properties of rocks. The concept and characteristics of soils. Geological zoning. Methods of engineering and geological research, engineering and geological research for various types of construction. Principles of monitoring exogenous geological	5			v			v		v

		processes. Regional Engineering								
		Geology.								
		The discipline is aimed at the study								
		of methods for the image of objects								
		and the general rules of drawing,								
		using computer graphics; the study								
		of the basic principles and								
7	Engineering and computer	geometric modeling approach and	5				v	v	v	
	graphics	methodology for developing								
		applications with a graphical								
		interface; the formation of skills in								
		the use of graphic systems for the								
		development of drawings, using								
		2D and 3D modeling methods								
		The course is devoted to the study								
		of the basic concepts of higher								
		mathematics and its applications.								
		The main provisions of the								
		discipline are applied in the								
		teaching of all general education								
		engineering and special disciplines								
		taught by graduate departments.								
		The course sections include								
		elements of linear algebra and								
		analytical geometry, an	_							
8	Mathematics I	introduction to analysis,	5	V				V		
		differential calculation of								
		functions of one and several								
		variables. Methods for solving								
		systems of equations, problems of								
		using vector calculations in solving								
		problems of geometry, mechanics,								
		and physics are considered.								
		Analytical geometry on a plane								
		and space, differential calculation								
		of functions of one variable,								
		derivatives and differentials, study								

9	Mathematics II	of the behavior of functions, derivative and gradient in direction, extremum of a function of several variables. The discipline is a continuation of Mathematics I. sections of the course include integral calculus of a function of one variable and several variables, series theory. Indefinite integrals, their properties and methods of their calculation. Certain integrals and their application. Incorrect integrals. Numerical series theory, functional series theory, Taylor and Macloren Series, application of series to approximate calculations.	5	v			v		
10	Mathematics III	The discipline is a continuation of Mathematics II. The course includes sections: ordinary differential equations and elements of probability theory and mathematical statistics. Differential equations with separable variables, homogeneous, in full differentials, linear inhomogeneous differential equations with constant coefficients, systems of linear differential equations with constant coefficients, finding the probability of events, calculating the numerical characteristics of random variables, using statistical methods for processing experimental data are studied.	5	V			V		

11	Fluid mechanics	This fundamental course introduces students to fluid flow in pipes, surface facilities and in oil and gas wells. Topics to be covered are compressible and incompressible flow, fluid statics, dimensional analysis, laminar and turbulent flows, Newtonian and non-Newtonian fluids and two-phase flow.					v		v
12	Chemistry	Purpose: formation of knowledge on fundamental issues of general chemistry and skills of their application in professional activity. Summary Laws, theoretical propositions and conclusions that underlie chemical disciplines; properties and relationships of chemical elements based on the periodic law of D.I.Mendeleev and on modern ideas about the structure of matter; fundamentals of chemical thermodynamics and kinetics; processes in solutions; structure of complex compounds.	Y				Y		
13	Fundamentals of budgeting	The course strengthens knowledge and creates practical competencies based on the generalization of experience in transport construction in the discipline, the leading principles of pricing, advanced methods of calculating the estimated price, the use of software products in the estimate business, coordination, approval and examination of design and estimate documentation,		v	Y	v			

		assessment of calculated technical financial characteristics of							
		projects. The course is to teach future							
14	Design and operation of pump and compressor stations	specialists about technology and organization of the construction of the linear part of trunk pipelines and the development of process diagrams for the installation of structures of pump and compressor stations, as well as the main and auxiliary process equipment, engineering networks and process pipelines, ensuring their safe operation and reliability over a standard service life and during	5			v		v	
15	Design and operation of oil and gas storage facilities	construction and reconstruction. Underground and aboveground reservoirs. The foundation and the base of the tanks. When choosing sites for the placement of reservoirs, they take into account: the quality and condition of the soils lying at the base of the site; climatic and seismic conditions of the area; the regime of groundwater flow, their chemical composition, as well as permissible loads on the soil and the type of foundation that must be established for each case after a thorough analysis. Classification of oil depots. The main structures of oil depots. The nomenclature of domestic steel tanks. Technical characteristics of tanks Vertical isothermal tanks. Axisymmetric	5			v		v	

		teardrop-shaped tanks. Horizontal tanks. Technical and economic indicators. Losses of oil and petroleum products during the operation of tank farms. The general procedure for the repair of tanks at oil depots. Determination of the volume of the tank farm and selection of tank types.								
16	Design of main pipelines	Trunk transportation of oil and gas. Classification of the main pipeline by types of pumping product (oil, petroleum products, natural gas). Determination of physical and chemical properties of oil, petroleum products and natural gas. Determination of the strength characteristics of the pipes of the main pipeline. Technological (hydraulic) calculation of the main pipeline by types of pumping product (oil and gas). Selection of the main equipment of the main pipeline. Determination of the number of pumping stations. Construction of the profile of the main pipeline route with the arrangement of pumping stations and the technological scheme of the main pipeline.	5				v		v	
17	Strength of materials	Stretching and compression. Pressure in sections and deformations of a direct core. Mechanical properties of materials at a stretching and com-pression. Calculation on durability and rigidity at a stretching-	6	Y						v

		compression. Geometrical characteristics of flat sections. Shift and torsion. Cal-culation on durability and rigidity at torsion. A bend. Normal and tangents of a pressure at a bend. Calculation on durability at a bend. The theory of the intense and deformed conditions. A hypothesis of a limiting condition. Complex resistance. Stability of balance of deformable systems. Dynamic loading.								
18	Thermodynamics and heat engineering	The discipline studies the basic concepts and definitions of heat. The first and the second law of thermodynamics. Thermodynamic processes of ideal gases. A discharge throttling gases and vapors. The process of vaporization, P,V; T, S; h, s diagram of water vapor. Thermodynamic cycles of thermal engines and plants. Heat transfer. The thermal conductivity. Convective heat transfer. The heat transfer during forced and free motion of the fluid. Fundamentals of thermal calculation of heat exchangers.	5	v			v			
19	Physics I	Objectives: to study the basic physical phenomena and laws of classical, modern physics; methods of physical research; the relationship of physics with other sciences. The following topics are considered: mechanics, dynamics of rotational motion of a solid	5	v					v	

		body, mechanical harmonic waves, fundamentals of molecular kinetic theory and thermodynamics, transport phenomena, continuum mechanics, electrostatics, direct current, magnetic field, Maxwell equations.								
20	Physics II	The course studies the laws of physics and their practical application in professional activity. Solving theoretical and experimental-practical educational problems of physics for the formation of the foundations in solving professional problems. Assessment of the degree of accuracy of the results of experimental or theoretical research methods, modeling of physical condition using a computer, study of modern measuring equipment, development of skills for conducting test studies and processing their results, distribution of the physical content of applied tasks of the future specialty.	5	v					v	
21	Operation of main pipelines	The order of operation of the main oil pipeline and the main gas pipeline. Organization of operation of the linear part and pumping stations of the main pipeline. Operational dispatch control of the main pipeline. Maintenance and repair of the main pipeline. Special	4			v			v	

		operating conditions of the main pipeline.												
	L	Cycle of	basic discipl		ı	1		1	l	ı	ı	ı		
		Election	on Componer	nt										
1	Fundamentals of rationing and tariff formation	Determination of normative technical losses, technical and technological norms of consumption of raw materials, materials, fuel, energy during the operation of the main pipeline by types of pumping products (oil and/or natural gas). Formation of a tariff for: - transportation of oil and/or natural gas; - storage of oil and/or natural gas; - internal and external market.	5		v		v							
2	Solving the problems of oil and gas engineering	The discipline considers case studies with industry and their solutions, which include topics of machinery and technology in drilling, mining, development and transportation; safety equipment, labor protection, management.	5					v		Y				
			ofileded disc											
			sity compone	nt			,		T			1	•	
1	Engineering calculation approaches in the oil and gas industry	This discipline covers the basic methods of statistics, including quantitative and qualitative methods, which are necessary in the modeling and design of objects, adoption of engineering, organizational and technological and management decisions. Applied engineering problems are considered in order to form ideas about modern trends in industries.	4						v		v			

2	Management in the design and construction of oil and gas facilities	The course is aimed at the formation of the following professional competencies: creating a process model, building an object, selecting contractors, managing the work of contractors (design, construction and installation works, production), monitoring and forecasting the processes involved in terms of timing, money and labor costs and the ratio of the developed business-models	5		v		V		v				
3	Multidisciplinary petroleum project	This class provides multidisciplinary setting for students to integrate knowledge of geology, geophysics, and petroleum engineering to solve real tasks of the oil and gas industry. Students work in teams, and in the end present results of their work in oral and written forms.	5			Y			v				
4	Corrosion protection of oil and gas equipment	Basic concepts and definitions of corrosion processes. Chemical corrosion of metals. Electrochemical corrosion of metals. Corrosive surveys. Insulation coating metal structures. Cathodic protection of underground metal structures. Protector protection of pipelines and tanks. Electro drainage protection of underground pipelines. Inhibitor corrosion.	6	v		v		v

		Cycle of pro	fileded discip	lines	•		•	·		
		Electio	n Component							

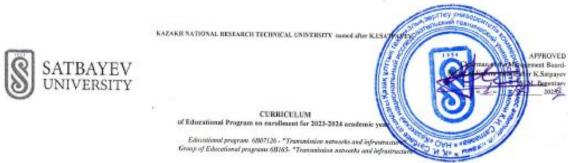

1	Risk analysis	This course embraces possible consequences in every certain situation the effective analysis of risks allows to find out problems and estimate prospects. Some themes are plugged in itself: it is a deterministic analysis of risks the "best, the worst and most credible variant"; it is a stochastic analysis of risks.	5		v			v		v
2	Engineering of oil and gas processing complexes	This discipline covers the engineering processes of oil and gas processing complexes and solving problems when choosing methods. The purpose of this course is the formation of students' skills in the application of analytical and numerical tools for engineering oil and gas processing complexes.	5		v	v		v		
3	Overhaul of pipelines	Overhaul of pipelines Types of repair work. Current repairs. Average repair. Major repairs. Diagnostics of trunk pipelines. Types, their advantages and disadvantages. Organization of operation of the linear part and pumping stations of the main pipeline. Maintenance of the main pipeline. Special operating conditions of the main pipeline. Safety precautions during repair work.	5		v				v	
4	Petroleum regulations and practices	This course covers major aspects of law governing oil and gas business. It introduces such topics as scientific and engineering	5	v	v	v				

		background of oil and gas law, energy policy, and oil and gas lease. This course focuses on the legal rules that govern the development of privately owned mineral rights, which often also apply to governmentally owned resources. It covers topics such as the nature, protection, and conveying of oil and gas rights, leasing, and taxation.									
5	Fundamentals of Data Analytics and Programming for Petroleum Engineers	The main purpose of the discipline is to assess the reliability of equipment in the oil and gas industry and predict complications, the choice of methods to increase oil supply, optimization of transportation routes, mastering the basic skills of predicting the effectiveness of new fields.	5						v		V
6	Petroleum Engineering seminar	Professional communication and research skills are essential qualities for future researchers. This course is aimed at developing the skills of oral and written communication, critical analysis of information and their processing, presentation and giving/receiving feedback from colleagues, as well as the preparation of scientific theses and articles	5		v	v					
7	Multiphase flow systems	The course covers the formation of multiphase flows in horizontal, inclined and vertical wells, and pipelines, methods of dynamic calculations, the definition of technological parameters. General	5	v							v

		conservation laws, interfacial conditions, and constitutive relationships. Multiphase flows in pipes, maps of flow regimes, distribution of concentrations, pressure drop.								
8	Construction of pipelines	Construction of pipelines The order of construction of the main oil pipeline and the main gas pipeline. Organization of construction of the linear part and pumping stations of the main pipeline. Features of transitions of trunk pipelines through artificial and natural barriers. Construction supervision during the construction of the main pipeline. Safety precautions in the construction of trunk pipelines	5			v			v	
9	Theory and practice of project management	The discipline is aimed at studying the general trends of project management in market conditions in order to increase productivity in the professional industry. The essence, concept, composition, tasks and problems of management. Study of the scientific methodology of project management. The concept of organization, the external and internal environment of the team, communication. Requirements for project management. The role of decision-making in project management. The concept of anticrisis programs in the performance of managerial functions. The	5		v	v				

		concept of management culture and professional etiquette								
10	Technical policy	An idea is given about the strategic development of the organization / enterprise through the use of research and development work, technical regulation during the operation of the main pipeline.	5	v		v		v	v	
11	Environmental and safety management	The course covers the principles and management of the environment and environmental safety. Environmental assessment. Environmental expertise. Environmental permits. Environmental damage. Ecological culture, education and enlightenment.	5		v				v
