List of abbreviations and designations

NCJS KazNRTU named after K. I. Satbayev—NCJS «KAZAKH NATIONAL RESEARCH TECHNICAL UNIVERSITY named after K.I. SATBAYEV»; SOSE — State obligatory standard of education of the Republic of Kazakhstan;

EP – educational program;

IWS – independent work of a student (student, undergraduate, doctoral student);

IWST – independent work of a student with a teacher (independent work of a student (undergraduate, doctoral student) with a teacher);

WC – working curriculum;

UC – university component;

CC – component of choice;

NQF – National Qualifications Framework; S

QF – Sectoral Qualifications Framework;

LO – learning outcomes;

KC – key competencies

1. Description of educational program

The field of professional activity of the bachelor of the educational program 6B06108 "Digital monitoring of machines and equipment" includes:

- sections of science and technology that contain a set of tools, techniques, methods and methods of human activity aimed at creating competitive mechanical engineering products and based on the use of modern methods and tools for design, calculation, mathematical, physical and computer modeling;
- organization and execution of works on creation, installation, commissioning, maintenance, operation, diagnostics and repair of technological machines and equipment, development of technological processes for the production of parts and assemblies;
- preparing graduates for production and technological activities related to the process of using software products aimed at meeting expectations and requirements for determining the reliability of machines and equipment, for organizational and management activities related to the maintenance of software products of the digital diagnostics class and technical condition management through information systems, data analysis.

The objects of professional activity of the bachelor are:

- technological machines and equipment of various complexes;
- technological equipment and means of mechanization and automation of technological processes;
- production technological processes, their development and development of new technologies;
- installation and repair of technological machines and equipment;
- means of information, metrological, diagnostic and management support of technological systems to achieve the quality of manufactured products;
 - means of testing and quality control of technological machines and equipment;
 - technological processes of assembling metal structures;
- methods of data analysis to determine the technical condition and forecast the reliability of machines and equipment;
- normative and technical documentation, systems of standardization and certification, methods and means of testing and quality control of products.

Types of professional activity are:

- experimental and research activities;
- calculation and design and analytical work;
- production and technological infrastructure;
- service and maintenance;
- installation and adjustment;
- organizational and managerial information.

The bachelor's professional activity subjects are:

- technological machines and equipment; power equipment;
- machine drive systems;
- traffic management systems;
- operator's life support systems;
- structural and operational materials;
- equipment for manufacturing, testing and recycling of technological machines;
- equipment for maintenance and repair of technological machines;
- control and measuring devices for the manufacture and operation of machines;
- modern tools for extracting and processing large amounts of data in the field of technical condition of machines and equipment;
 - equipment for automating machine work processes;
 - machine design equipment

2. Purpose and objectives of educational program

The purpose of the OP: Training of highly qualified and competitive specialists competent in the field of digital monitoring and predictive maintenance systems for process equipment in the mining, metallurgical and oil and gas industries. Development of personal qualities in students, formation of general cultural and professional competencies.

OP tasks:

- studying the cycle of general education disciplines to ensure social and humanitarian education based

on the laws of socio-economic development of society, history, modern information technologies, the state language, foreign and Russian languages;

- study of the cycle of basic disciplines that provide knowledge of natural, general technical and economic disciplines as the basis of professional education;
- the cycle of basic disciplines is aimed at studying the main theoretical aspects of the reliability of technological machines, theoretical and practical methods, areas of human activity based on the creation of competitive technological machines and modern digital design methods and tools, predictive maintenance systems, mathematical, physical and computer modeling of technological processes;
- study of disciplines that form the skills of planning and organizing research work, designing reliable technologies and devices;
 - familiarization with technologies and equipment of enterprises at different stages of practical training;
- mastering the skills and abilities of laboratory research, technological calculations, selection and design of equipment using modern computer technologies and programs

3. Requirements for evaluating the learning outcomes of an educational program

The scope of the bachelor's degree program is 240 credits, regardless of the form of study, the educational technologies used, the implementation of the bachelor's degree program using a network form, the implementation of the bachelor's degree program according to an individual curriculum, including accelerated learning.

Descriptors of the level and scope of knowledge, skills, and competencies

A – knowledge and understanding:

- A1 Ability to logically represent the acquired knowledge and understanding of systemic relationships within disciplines, as well as interdisciplinary relationships in modern science.
- A2-Knowledge of approaches and methods of critical analysis, the ability to use them practically in relation to various forms and processes of production.
- A3-perform basic calculations of the main parameters of technological machines, justify their choice depending on the production levels.
 - B-Applying knowledge and understanding
- B1-Independent development and promotion of various options for solving professional problems using theoretical and practical knowledge
- B2-put forward hypotheses for acquiring new knowledge necessary for daily professional activities and continuing education
 - B3 on the basis of basic knowledge, be able to navigate adequately in various situations
 - C forming judgments
- C1 on the basis of knowledge about economic patterns formation of hypotheses, forecasting and planning of economic activity of the enterprise.
 - C2 be able to work in a team, correctly defend your point of view, and offer new solutions.
 - CC3 skills of daily acquisition of new knowledge necessary for professional activity.
 - D personal abilities
 - D1 compliance with the standard of business ethics, possession of ethical and moral standards of behavior.
 - D2-ability to find a compromise, correlate your opinion with the opinion of the team
- D3-know social and ethical values based on public opinion, traditions, customs, and social norms and be able to navigate them in their professional activities.

Completion competencies

	General Cultural competencies (CA)											
OK 1	Ability to communicate in oral and written forms in the state, Russian and foreign languages to solve problems of interpersonal and intercultural interaction											
OK 2	Understanding and practical use of healthy lifestyle standards, including prevention issues, the ability to use physical culture to optimize performance											
OK 3	Ability to analyze the main stages and patterns of historical development of society for the formation of civil											
OK 4	Ability to use the basics of philosophical knowledge to form a worldview position											

~~~~	
OK 5	Ability to critically use the methods of modern science in practical activities
OK 6	Awareness of the need and acquisition of the ability to independently learn and improve their skills throughout their working life
OK 7	Knowledge and understanding of professional ethical standards, proficiency in professional communication techniques
OK 8	Ability to work in a team tolerant perception of social, ethnic, confessional and cultural differences
OK 9	Ability to use the basics of economic knowledge in various fields of activity
	General Professional competencies (GIC)
OPK-1	Ability to acquire new knowledge with a high degree of independence using modern educational and
01111	information technologies
OPK-2	Possession of computer skills sufficient for professional activity with basic programming
OPK-3	Knowledge of the main methods, methods and means of obtaining, storing, processing information, the ability to use modern technical means and methods for solving communication problems. information technologies using traditional information carriers, distributed knowledge bases, as well as information in global computer networks
OPK-4	Understanding of the essence and significance of information in the development of modern society, the ability to receive and process information from various sources, the willingness to interpret, structure and formalize information in a form accessible to others
OPK-5	Ability to solve standard problems professional activity based on information and bibliographic culture with the use of information and communication technologies and taking into account the basic requirements of information security
	Professional competencies (PC)
PC 1	Ability to systematically study scientific and technical information, domestic and foreign experience in the relevant training profile
PC 2	Ability to take part in the preparation of scientific reports on the completed task and implement the results of research and development in the field of technological machines and equipment
PC 3	Ability to participate in work on innovative projects using basic research methods
PC 4	Ability to model technical objects and technological processes using standard packages and computer-aided design tools, willingness to conduct experiments using specified methods with processing and analysis
PC 5	Possession of approaches and methods of critical analysis, the ability to use in practice with regard to various forms and processes of technological processes of
SC 6	the Ability to learn a new technique, technological and technical documentation make adjustments with respect to operating conditions
7 PC	the Ability to participate in work on the calculation and design of details and units of technological machines in accordance with the technical tasks and use the standard tools of design automation
PC 8	Ability to conduct patent research to ensure the novelty of the new design solutions and their patentability and the identification of indicators of technical level of engineered products
PC 9	Ability to explore and optimize the modes of operation of technological machines during their operation
PC 10	the Ability to pre-technical-economic justification of design solutions
PC 11	the Ability to design technical equipment jobs with accommodation of technological equipment, the ability to learn the input equipment
PC 12	the Ability to participate in work on fine-tuning and development of technological processes during the preparation of the production of a new product, to check the quality of the installation and commissioning testing and commissioning of new types of products, components and parts manufactured products
PC 13	the Ability to check the technical condition and residual life of process equipment, arrange a routine inspection and maintenance of technological machines and equipment

PC 15	the Ability to choose the main and auxiliary materials, methods of implementation of technological processes, to apply advanced methods of operation of technological equipment
PC 16	to Wield the main methods of calculation of parameters of technological equipment, the method of their selection on the directories and catalogs.

## 4. Passport of educational program

4	Educational program name	6B06108 "Digital monitoring of machines and
		equipment"
5	Short description of educational	Educational program 6B06108 "Digital monitoring of
	program	machines and equipment" is aimed at preparing graduates
		for production and technological activities related to the
		process of using software products aimed at meeting the
		expectations and requirements for determining the
		reliability of machines and equipment, for organizational
		and management activities related to maintenance
		software products of the digital diagnostics class and
		technical condition management through information
	Drugge and of ED	systems and data analysis.
6	Purpose of EP	Training of highly qualified and competitive specialists competent in the field of digital monitoring and predictive
		maintenance systems for process equipment in the mining,
		metallurgical and oil and gas industries. Development of
		personal qualities in students, formation of general
		cultural and professional competencies
7	Type of EP	Innovative
8	The level based on NQF	6
9	The level based on IQF	6
		no
	List of competencies of educational	
	program	KK2 Basic literacy in natural science disciplines
		KK3. General engineering competencies
		KK4.Professional competencies
		KK5. Engineering-computer competencies
		KK6 Engineering-work competencies
		KK7. Socio-economic competences
		KK8. Special-professional competences
12	Learning outcomes of educational	EO1: Apply the basic patterns and forms of regulation of
	program	social behavior, human and civil rights and freedoms when
		developing social projects, demonstrating respect for
		people, tolerance for another culture, and readiness to
		maintain partnerships.
		EO2: Demonstrate knowledge of sections of mathematics,
		physics and other natural sciences and apply them to solve
		engineering problems in the field of service maintenance
		of machines and equipment.
		EO3: Apply knowledge of economic laws, occupational safety and environmental standards, rules of moral
		¥
		development, and a culture of academic integrity at a

professional level.

EO4: Knows the basic methods, methods and means of obtaining, storing, processing information, knows how to use modern technical means and information technologies to solve communication problems using traditional information carriers, distributed knowledge bases, as well as information in global computer networks.

EO5: Apply innovative methods of installation and assembly of process equipment components. Assess the technical condition and remaining service life of equipment, organize preventive inspections and routine repairs of equipment using diagnostic instruments, and process measurement results.

EO6: Demonstrates an understanding of the fundamentals of programming, software creation, algorithm and data structure development, and object-oriented programming. EO7: Ready to carry out work on standardization, technical preparation for certification of technical means and equipment, organize metrological support of technological processes using standard quality control methods.

EO8: Designs and creates software, web applications, mobile applications using the UML language, modern development tools, libraries, templates and Frameworks EO9: Possess programming skills in high-level languages, microcontroller programming tools and languages, software for modeling and researching process control systems.

EO10: Possess methods of information processing and synthesis of automation systems, methods of designing and programming data management systems. Use the functionality of Scada systems in practice.

EO11: Demonstrate theoretical knowledge and practical skills in the field of operational reliability and technical diagnostics of machines and equipment. Use the technical capabilities of microprocessor technology, means of receiving and transmitting information and software products to solve automation problems.

EO12: Solve engineering problems using the basic laws of mechanics, electrical engineering, hydraulics, thermodynamics and heat and mass transfer.

EO13: Use the principles of formulation and algorithms for solving research problems in order to systematically develop knowledge about project management. Assess technical and economic performance indicators of industrial enterprises.

EO14 Apply theoretical and experimental methods for calculating machine parameters and application software to carry out design and verification calculations. Use the laws and methods of theoretical mechanics. Apply in practice methods for calculating parts and assessing the strength of materials.

		English is a discipline of the general	5	V													
		education cycle. After determining the															
		level (according to the results of															
		diagnostic testing or IELTS results),															
1	Foreign language	students are divided into groups and															
		disciplines. The name of the discipline															
		corresponds to the level of English															
		proficiency. When moving from one															
		level to another, the prerequisites and															
		post-prerequisites of the disciplines															
		In this course author considers socio-	5	V													
		political, socio-cultural spheres of															
		communication and functional styles															
		of the modern kazakh (russian)															
		language. The course covers the															
		specifics of the scientific style to															
2	Kazakh (russian) language	develop and activate professional															
		communication skills and abilities of															
		students. Also it allows students to															
		leavn the basics of scientific style															
		practically and develop the ability of															
		production structural and semantic text															
		analysis															
		The aim of the course is to gain	5	v					İ								
		theoretical knowledge in information															
	<b>.</b>	processing, the latest information															
3	Information and	technologies, local and global															
	communication technology	networks, the methods of information															
		protection; Getting the right use of text															
		editor editors and tabulators; creation															

		of base and different categories of									
		applications									
		The purpose of the discipline is to	5	v							
		provide objective historical knowledge	3	•							
		about the main stages of the history of									
		Kazakhstan from ancient times to the									
		present day; introduce students to the									
		problems of the formation and									
		development of statehood and									
4	History of Kazakhstan	historical and cultural processes;									
	Thistory of Hazakiistan	contribute to the formation of									
		humanistic values and patriotic									
		feelings in the student; teach the									
		student to use the acquired historical									
		knowledge in educational, professional									
		and everyday life; evaluate the role of									
		Kazakhstan in world history									
		The purpose of the discipline is to	5	v							
		teach students the theoretical									
		foundations of philosophy as a way of									
		knowing and spiritually mastering the									
		world; developing their interest in									
		fundamental knowledge, stimulating									
5	Philosophy	the need for philosophical assessments									
3	Filliosophy	of historical events and facts of reality,									
		assimilating the idea of the unity of the									
		world historical and cultural process									
		while recognizing the diversity of their									
		skills in applying philosophical and									
		general scientific methods in									
		professional activities									
		The objectives of the disciplines are to	3	v	V						
		provide students with explanations on									
	Module of socio-political	the sociological analysis of society,									
6	knowledge (sociology,	about social communities and									
	political science)	personality, factors and patterns of									
		social development, forms of									
		interaction, types and directions of									

					,	- 1	 -		1	1	 
	social processes, forms of regulation of										
	social behavior, as well as primary										
	political knowledge that will serve as a										
	theoretical basis for understanding										
	social -political processes, for the										
	formation of political culture,										
	development of a personal position and										
	a clearer understanding of the extent of										
	one's responsibility; help to master the										
	political, legal, moral, ethical and										
	socio-cultural norms necessary to act										
	in the interests of society, form										
	personal responsibility and achieve										
	personal success										
	The purpose of the disciplines is to	5	V		v						
	study the real processes of cultural										
	creative activity of people who create										
	material and spiritual values, identify										
	the main trends and patterns of cultural										
	Module of socio-political development, changes in cultural eras,

	Purpose: to increase the public and	5	V		v						
	individual legal awareness and legal										
	culture of students, as well as the										
8	Fundamentals of anti- formation of a knowledge system and a										
^	corruption culture and law civic position on combating corruption										
	as an antisocial phenomenon.										
	Contents: improvement of socio-										
	economic relations of the Kazakh										

		society, psychological features of corrupt behavior, formation of an anti- corruption culture, legal responsibility for acts of corruption in various fields									
9	Fundamentals of economics and entrepreneurship	Purpose: To develop basic knowledge of economic processes and skills in entrepreneurial activities.  Content: The course aims to develop skills in analyzing economic concepts such as supply and demand, and market equilibrium. It includes the basics of creating and managing a business, developing business plans, risk assessment, and strategic decision-making	5	v	v						
10	Fundamentals of scientific research methods	Purpose: to form a systematic understanding of the methodology of scientific cognition among students; to develop scientific thinking skills; to form experience in organizing and conducting scientific research; to develop a competence-based approach to the use of methods and rules for conducting research in the field of mechanical engineering, related processes and their technologies.  Contents: stages of scientific research, terms and concepts, methods of conducting an experiment, mathematical methods of processing research results. Concepts of engineering, laboratory and industrial experiment, bench research	5	Y		Y					
11	Ecology and life safety	Purpose: formation of ecological knowledge and consciousness, obtaining theoretical and practical knowledge on modern methods of rational use of natural resources and	5		v						

				1	1		, ,	1		T	-			ı	
		environmental protection.													
		Contents: the study of the tasks of													
		ecology as a science, the laws of the													
		functioning of natural systems and													
		aspects of environmental safety in													
		working conditions, environmental													
		monitoring and management in the													
		field of its safety, ways to solve													
		environmental problems; life safety in													
		the technosphere, emergencies of a													
		natural and man-made nature.													
		Purpose: formation of financial literacy	5	v		V									
		of students on the basis of building a													
		direct link between the acquired													
		knowledge and their practical													
		application.													
		Contents: using in practice all kinds of													
	Basics of Financial	tools in the field of financial													
12		management, saving and increasing													
	Literacy	savings, competent budget planning,													
		obtaining practical skills in calculating,													
		paying taxes and correctly filling out													
		tax reports, analyzing financial													
		information, orienting in financial													
		products to choose adequate													
		investment strategies													
		Cycl	e of basic	discip	lines										
			iversity c	ompon	ent										
		Purpose: to introduce students to the	5		V										
		fundamental concepts of linear													
		algebra, analytical geometry and													
		mathematical analysis. To form the													
13	Mathematics I	ability to solve typical and applied													
13	iviamematics i	problems of the discipline. Contents_													
		Elements of linear algebra, vector													
		algebra and analytical geometry.													
		Introduction to the analysis.													
		Differential calculus of a function of													

	1			1		-		-			-	
		one variable. The study of functions										
		using derivatives. Functions of several										
		variables. Partial derivatives. The										
		extremum of a function of two										
		variables										
		Purpose:To form ideas about the										
		modern physical picture of the world										
		and scientific worldview, the ability to										
		use knowledge of fundamental laws,										
		theories of classical and modern										
1.4	Dlaveice	physics. Contents_physical	_									
14	Physics	fundamentals of mechanics,	5	V								
		fundamentals of molecular physics and										
		thermodynamics, electricity and										
		magnetism, vibrations and waves,										
		optics and fundamentals of quantum										
		physics.										
		Purpose: To teach students integration	5	v								
		methods. To teach you how to choose										
		the right method for finding the										
		primitive. To teach how to apply a										
		certain integral to solve practical										
		problems. Contents_integral calculus										
		of the function of one and two										
15	Mathematics II	variables, series theory. Indefinite										
		integrals, methods of their calculation.										
		Certain integrals and applications of										
		certain integrals. Improper integrals.										
		Theory of numerical and functional										
		series, Taylor and Maclaurin series,										
		application of series to approximate										
		calculations										
		Purpose: To develop students'	5				V		v			
		knowledge of drawing construction										
16	Engineering and computer	and skills in developing graphical and										
16	graphics	textual design documentation in										
		accordance with standards.										
		Content: Students will study ESKD										

		. 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1		I	ı			1 1	ı	1		Т	
		standards, graphic primitives, geometric constructions, methods and properties of orthogonal projection, Monge's projection, axonometric projections, metric tasks, types and features of connections, creating part sketches and assembly drawings, detailing, and creating complex 3D solid objects in AutoCAD											
17	Fundamentals of the specialty	The purpose of studying the discipline is to form students' understanding of the basics of mining and metallurgical and oil and gas production, extraction, processing and transportation of minerals, machinery and equipment used in the mining and metallurgical and oil and gas industry. During the study, students will be introduced to the technological processes and the main equipment of the mining and metallurgical and oil and gas industries, the main methods of maintenance, the principles of predictive analytics of equipment	4				v			V			
18	Thermodynamics, heat transfer and thermal engineering installations	The main issues and methods for obtaining, converting, transferring and using thermal energy, the fundamental principles of operation and schemes of heat engineering installations, to teach how to evaluate and compare the energy and economic indicators of heat power plants, to effectively use the means of production in technological processes. The study of the physical foundations, devices, principle of operation and technical characteristics of the main and auxiliary heat and power equipment and systems	5		v						¥		

	I			1			- 1	 -		- 1	 
19	Theoretical and applied Mechanics	To involve students in the development and solution of tasks that help bridge the gap between scientific theory and engineering practice.  Contents Theoretical mechanics, theory of mechanisms and machines. Theoretical mechanics deals with the general laws of mechanical movements of material bodies and the mechanical interactions between them. In the theory of mechanisms and machines, general methods of research, construction, and kinematics of mechanisms and machines are studied.								V	V
20	Basics of hydraulics and hydraulic drives of technological machines	Application of knowledge in the field of technical fluid mechanics (hydraulics), for the calculation of hydraulic pressure systems, hydraulic machines, hydraulic and pneumatic actuators, widely used in the oil industry. Full hydraulic calculation of various hydraulic systems, hydraulic and pneumatic equipment drives. Getting the basics of knowledge in the field of hydraulics - theoretical fluid mechanics in the field of hydraulic and pneumatic actuators	5							V	v
21	Strength of materials	Purpose: To teach students integration methods. To teach you how to choose the right method for finding the primitive. Stretching and compression. Pressure in sections and deformations of a direct core. Mechanical properties of materials at a stretching and compression. Calculation on durability and rigidity at a stretching-compression. Geometrical charac-teristics of flat sections. Shift and torsion. Cal-	6							v	V

	1							 1		
		culation on durability and rigidity at torsion. A bend. Normal and tangents of a pressure at a bend. Calculation on durability at a bend. The theory of the intense and deformed conditions. A hypothesis of a limiting condition. Complex resistance. Stability of balance of deformable systems. Dynamic loading								
22	Interchangeability, standardization and technical measurements	Studying the basic laws and concepts of standardization and interchangeability, methods and means of controlling deviations of the shape, roughness and waviness of the surfaces of parts, the role of standardization in improving the quality of machines Interchangeability binds in a single whole design, production technology and control products. Standardization and unification of parts and elements contribute to the acceleration and cheapening of the design and manufacture of products					V			
23	Construction materials processing machinery and equipment	The solution of the most important technical problems associated with the creation and development of the most economical materials, increasing the accuracy, reliability and performance of mechanisms and devices depends largely on the development of materials science and technology for producing and processing materials, concretization of knowledge about the relationship between the composition, structure and properties of materials used for management of the structure and properties of structural materials	5			v				v

24	Intellectual data analys	The discipline "Intelligent Data Analysis" helps to form ideas about the types of problems arising in the field of Data Mining and methods of their solution that will help students to identify, formalize and successfully solve practical problems of data analysis, develop theoretical knowledge, practical skills on the application of modern methods of data mining in various spheres of human activity	5				V	v		
25	Bases of designing and details of cars	Purpose: to acquire knowledge of calculations and design of machine parts and assemblies, taking into account the criteria of strength, reliability and stability. Contents_general principles of design and construction, construction of models and calculation algorithms for standard machine parts taking into account performance criteria, fundamentals of theory and methodology for calculating standard machine parts, computer technologies for designing assemblies and machine parts. Basic requirements for machine parts and assemblies	5					v		V
26	Electrotechnics and microelectronics	Electrical and magnetic circuits. Basic definitions, parameters and methods of calculation of DC electrical circuits. Analysis and calculation of linear AC circuits. Analysis and calculation of electrical circuits with nonlinear elements. Analysis and calculation of magnetic circuits. Electromagnetic devices and electrical machines. Fundamentals of electronics and	5						v

		and maximum values in an array,									İ

		string processing, iterative and recursive algorithms, building flowcharts of algorithms and developing programs based on them									
29	The dynamics and	Students study the criteria for calculating technological machines and structures for strength. To learn the formulation and analysis of calculation results, the ability to determine operating stresses, to master a number of accurate and approximate methods for determining the characteristics of operational loads, considering the bearing capacity of parts and structures as a random variable, to be able to calculate dynamic loads in drives and other parts of technological machines	4						V		V
30	Technology of manufacturing technological machines	Mastering the discipline is based on the study of the methodology for calculating the economic efficiency of the method of obtaining blanks, normalizing operations; application of operations design methodology; methods for calculating the minimum allowances, cutting conditions, the required amount of technological equipment, methods for ensuring the specified accuracy of manufacturing parts, technological processes for the production of standard parts and assemblies of machines and equipment	5		V					v	
31	Technical diagnostics of technological machines	The course is aimed at studying the theoretical foundations of technical diagnostics and obtaining practical skills in the use of non-destructive testing methods to assess the technical condition of technological machines and equipment; to familiarize students	4					v		V	

	1	T		1	1	 	- 1	- 1			1	1	1	
		with the basics of the theory of												
		technical diagnostics, types of												
		technical condition, controlled												
		parameters, technical diagnostics												
		systems; to study the physical												
		foundations of non-destructive testing												
		methods for detecting and diagnosing												
		malfunctions of technological												
		equipment; familiarization with												
		equipment for non-destructive testing,												
		test methods, acquisition of practical												
		skills												
		Objective: to study the key aspects of	5						v	•				
		protecting information systems and												
		networks from various types of threats,												
		including attacks on software,												
		malware, phishing, insider threats and												
		others. Contents: Introduction.												
32	Basics of cybersecurity	Principles of cybersecurity. Data												
		encryption. Access control. Security												
		audit. Developing security policies and												
		responding to incidents. Legal and												
		ethical aspects in the field of												
		cybersecurity regulating the use of												
		information technologies												
		The purpose of studying the discipline	5						,	-	v			
		is to acquire the primary skills												
		necessary for studying system												
		programming and operating system												
		administration, including the skills of												
		configuring and analyzing operating												
33	Operating systems	systems. Special attention will be paid												
		to the three main subsystems of												
		operating systems: process												
		management (processes, threads, CPU												
		scheduling, synchronization and												
		deadlocks), memory management												
		(segmentation, pagination, paging), file												

		systems and operating system support											
		The course covers to rice such as the	5										
		The course covers topics such as: the	3					V	V				
		paradigm of object-oriented											
		programming; classes and objects;											
		principles of creating scalable software											
		using a high-level method for											
34	Object oriented	designing business environment concepts in a programming language;											
34	programming	programming languages C++, Java and											
		C#; principles of abstractions,											
		encapsulation, inheritance,											
		polymorphism; software design											
		patterns; practical skills in creating											
		software products											
		•	e of basic	disci	nlines	l					ļ	<u> </u>	
		•	mponent		-								
		Students study the basics of well	5					v					
		construction technology, oil and gas											
		production. Acquisition of skills for											
		competent choice of the method of											
		opening productive objects, designing											
		the design of wells, choosing methods											
		for influencing the productive											
		formation, calculating the modes of											
		operation of the "well-formation"											
35	Oil and gas production	system. The study of techniques and											
	technologies	technologies used in the oil and gas											
		industry, methods of construction and											
		operation of wells, collection and											
		preparation for transportation of oil											
		and gas in the fields, underground gas											
		storage. Acquisition of skills in											
		calculating wells, the need for											
		materials for the preparation of drilling											
		fluid, drilling mode parameters,											
		physical properties of oil and gas, gas											

		well flow rates								
36	Mining technologies	The aim of the course is to contribute to the development of scientific and technical thinking and the acquisition by students of the necessary knowledge and practical skills in the field of technology of stripping and mining operations in open development  Objectives of the course: study of the level of mining and the need for them in the national economy, information about mineral deposits and the condition of their occurrence; familiarization with the methods of mining and prospects for their development; the essence of underground mining and the main mine workings; the main production processes and technical and economic indicators of mines; methods of opening and systems development of mineral deposits; basic technological processes	5			v				
37	Technologies of metallurgical production	The purpose of teaching the discipline is to give students in-depth knowledge about the basic theoretical and technological provisions of the production of ferrous and non-ferrous metals; the ability to solve complex technological problems; to have the skills of independent work on the organization and management of experimental studies of technological processes at existing metallurgical units and promising experimental and pilot industrial complexes.  The objectives of studying the	5			V				

		discipline are to master the general laws of processes occurring in ferrous and non-ferrous metallurgy units; to master methods for calculating the charge, material and thermal balances of the process, intensification of technological processes and control of melting; to get acquainted with promising technologies in metallurgy, including hydrometallurgy								
38	Legal regulation of intellectual property	Purpose: the goal is to form a holistic understanding of the system of legal regulation of intellectual property, including basic principles, mechanisms for protecting intellectual property rights and features of their implementation.  Content: The discipline covers the basics of IP law, including copyright, patents, trademarks, and industrial designs. Students learn how to protect and manage intellectual property rights, and consider legal disputes and methods for resolving them	V		V					
39	Fundamentals of sustainable development and ESG projects in Kazakhstan	Purpose: the goal is for students to master the theoretical foundations and practical skills in the field of sustainable development and ESG, as well as to develop an understanding of the role of these aspects in the modern economic and social development of Kazakhstan. Contents: introduces the principles of sustainable development and the implementation of ESG practices in Kazakhstan, includes the study of national and international standards, analysis of successful ESG projects and	V	V						

		strategies for their implementation in									
		enterprises and organizations									
		Cycle	of profile	e disci	plines						
			versity co	ompoi	nent						
40	Installation and repair of technological machines	The acquisition by students of theoretical knowledge and practical skills on the basics of designing technological processes for the repair and restoration of worn parts, assembly units, machines and equipment; Determination of optimal modes of performance of production processes; quality control of repair of machines and equipment. Organization and engineering support of high-quality installation of equipment, methods of mechanization and automation of technological processes and rules for safe work	5			v			v		
41	Instrumentation and automation of technological machines	Formation of the future specialist knowledge of the design of devices, their purpose and principles of operation. As well as special training of engineering and technical personnel with scientific and practical knowledge in the field of operation, as it solves relevant engineering and scientific problems in the field of quality, performance properties and rational use of fuels, oils, lubricants and technical fluids	5			V			v		
42	Fundamentals of reliability of technological machines	The course provides students with knowledge and skills that provide a creative approach to solving problems of reliability and durability of technological machines and equipment necessary to increase the level of	5			v			v		v

		automation, reduce huge repair costs from machine downtime, and ensure safety during equipment operation. When studying disciplines, students master the issues of ensuring the reliability and durability of technological equipment; principles of rational use of technical parameters of technological machines									
43		Formation of future specialist knowledge on the design of diagnostic devices, their purpose and principles of operation directly at the place of production work, the use of devices for their intended purpose, assessment of the state of equipment, as well as special training of engineering and technical personnel with scientific and practical knowledge in the field of operation, t .To. it solves topical engineering, technical and scientific problems in the field of quality, operational properties and rational use of these devices			v				v		
44	Application design patterns	The course is aimed at studying the main design patterns and the canonical library of typical design patterns. Discusses specific problems and common design errors that developers face when writing code. The course covers information about how to decompose an application into layers, approaches to organizing business logic, the use and main aspects of the implementation of each solution under consideration, supported by examples of UML diagrams and source code.	5			V	V				

		T=		1		 		1		1		
45	Database Systems	Different types of data storage during creation of ecologically safe chemical and biochemical productions are considered, algorithms of the organization of effective access to data, differentiations of access rights to data are considered. A practical and theoretical part of a course puts the main emphasis on relational model of data and the SQL language for the solution of professional tasks and the complete description of schemes and processes of biotechnology and chemical engineering in terms of technological safety					v		V			
46	Microprocessor-based systems in the control systems	This course is intended for students to build distributed and concentrated control systems, principles of building industrial controllers, programming tools and programming languages of industrial controllers. As a result of mastering the discipline, the student will be able to develop software for industrial controllers using modern development tools and programming languages	5							Y		
47	SCADA-system	This course is intended for students to study the principles of building software and hardware complexes (STC), choosing hardware, learning the principles of building and choosing SCADA systems when solving problems of automation of technological processes and industries. As a result of mastering the discipline, the student will be able to develop a justification and choice of automated tasks, to make the most appropriate	5						V			

		T	1	ı			 	1	ı		1		1
		choice of hardware and software. The											
		study of the SCADA-system gives a											
		visual representation of the process											
		and provides, as a rule, a graphical											
		interface to the operator for monitoring											
		and control											
		Objective: to form the students'	6			v			V				
		knowledge system in the theory and											
		practice of application of productive											
		technologies. Data monitoring,											
		equipment condition diagnostics and											
		failure prediction, visualization of											
	Algorithm for diagnosing	results and maintenance planning.											
	and predicting machine	Content: within the framework of the											
48	failures based on artificial	course students will learn the basics of											
	intelligence and IoT	knowledge about technical means of											
	technology	obtaining information about the state											
		of machines, systems of data											
		collection, analysis and storage;											
		formation of knowledge and skills of											
		application of artificial intelligence IoT											
		technology for diagnostics and											
		prediction of residual life of machines											
		Goal: to develop a system of	6			V				v		v	
		knowledge among students in the field											
		of theory and practice of using											
		predictive technologies in the											
		maintenance and repair of											
		technological equipment. Contents: as											
	Software platforms and	part of the course, students will master											
49	technical systems for	the basics of knowledge about											
	predictive analytics	technical means of obtaining											
		information about the condition of											
		machines, collection systems,											
		familiarization and acquisition of											
		knowledge about the architecture of											
		software and hardware systems, the											
		training core of the system, the											

		database and their integration with									
		process control systems

Decision of the Academic Council of Kazntu named after K.Satpayev. Protocol No Lor "22" 2024y.

Decision of the Educational and Methodological Council of Kazntu named after K.Satpayev. Protocol Ni 6 or "19" 04 20 14y.

Decision of the Academic Council of the Institute E&ME . Protocol Ni 4 or "19" 01 20 214y.

Vice-Rector for Academic Affairs

Director of Institute of E&ME

Head of department TM&E

Specialty Council representative from employers

R. W. Uskenbayeva

K.K. Yelemessov B.Z. Kaliev

A.T. Shakenov
