NCJS KazNRTU named after K. I. Satbayev – NCJS «KAZAKH NATIONAL RESEARCH TECHNICAL UNIVERSITY named after K.I. SATBAYEV»; SOSE – State obligatory standard of education of the Republic of Kazakhstan; EP – educational program;

IWS – independent work of a student (student, undergraduate, doctoral student);

IWST – independent work of a student with a teacher (independent work of a student (undergraduate, doctoral student) with a teacher);

- WC working curriculum;
- UC university component;
- CC component of choice;
- NQF National Qualifications Framework; S
- QF Sectoral Qualifications Framework;
- LO learning outcomes;
- KC key competencies

1. Description of the educational program

The field of professional activity of the bachelor of the educational program «Predictive technologies and machine diagnostics» includes:

- sections of science and technology that contain a set of tools, techniques, methods and methods of human activity aimed at creating competitive mechanical engineering products and based on the use of modern methods and tools for design, calculation, mathematical, physical and computer modeling;

- organization and execution of works on creation, installation, commissioning, maintenance, operation, diagnostics and repair of technological machines and equipment, development of technological processes for the production of parts and assemblies.

The objects of professional activity of the bachelor are:

- technological machines and equipment of various complexes;

- technological equipment and means of mechanization and automation of technological processes;

- production technological processes, their development and development of new technologies;

- installation and repair of technological machines and equipment;

- means of information, metrological, diagnostic and management support of technological systems to achieve the quality of manufactured products;

- means of testing and quality control of technological machines and equipment;

- technological processes of assembling metal structures;
- welding equipment and power supplies, assembly and welding devices;

- normative and technical documentation, systems of standardization and certification, methods and means of testing and quality control of products.

Types of professional activity are:

- experimental and research activities;
- calculation and design and analytical work;
- production and technological infrastructure;
- service and maintenance;
- installation and adjustment;
- organizational and managerial information.

The bachelor's professional activity subjects are:

- technological machines and equipment; power equipment;
- machine drive systems;
- traffic management systems;
- operator's life support systems;
- structural and operational materials;
- equipment for manufacturing, testing and recycling of technological machines;
- equipment for maintenance and repair of technological machines;
- control and measuring devices for the manufacture and operation of machines;
- equipment for automating machine work processes;
- machine design equipment

2. Goals and objectives of the educational program

The purpose of the OP: The purpose of the educational program is to provide comprehensive and high-quality training of competitive, highly qualified specialists who are ready to solve practical and theoretical problems in predictive diagnostics in professional activities in modern conditions based on digital maintenance systems» is to provide comprehensive and high-quality training of competitive, highly qualified specialists who are ready to solve practical and theoretical problems on the reliability of professional activity in modern conditions based on the development of predictive maintenance systems, skills and abilities necessary for a future specialist.

OP tasks:

-studying the cycle of general education disciplines to ensure social and humanitarian education based on the laws of socio-economic development of society, history, modern information technologies, the state language, foreign and Russian languages;

- study of the cycle of basic disciplines that provide knowledge of natural, general technical and economic disciplines as the basis of professional education;

- the cycle of basic disciplines is aimed at studying the main theoretical aspects of the reliability of technological machines, theoretical and practical methods, areas of human activity based on the creation of competitive technological machines and modern digital design methods and tools, predictive maintenance systems, mathematical, physical and computer modeling of technological processes;

- study of disciplines that form the skills of planning and organizing research work, designing reliable technologies and devices;

- familiarization with technologies and equipment of enterprises at different stages of practical training;

- mastering the skills and abilities of laboratory research, technological calculations, selection and design of equipment using modern computer technologies and programs

3. Requirements for evaluating the learning outcomes of an educational program

The scope of the bachelor's degree program is 240 credits, regardless of the form of study, the educational technologies used, the implementation of the bachelor's degree program using a network form, the implementation of the bachelor's degree program according to an individual curriculum, including accelerated learning.

Descriptors of the level and scope of knowledge, skills, and competencies

A – knowledge and understanding:

A1 - Ability to logically represent the acquired knowledge and understanding of systemic relationships within disciplines, as well as interdisciplinary relationships in modern science.

A2-Knowledge of approaches and methods of critical analysis, the ability to use them practically in relation to various forms and processes of production. A3-perform basic calculations of the main parameters of technological machines, justify their choice depending on the production levels.

B-Applying knowledge and understanding

B1-Independent development and promotion of various options for solving professional problems using theoretical and practical knowledge

B2-put forward hypotheses for acquiring new knowledge necessary for daily professional activities and continuing education

B3 - on the basis of basic knowledge, be able to navigate adequately in various situations

C – forming judgments

C1 - on the basis of knowledge about economic patterns formation of hypotheses, forecasting and planning of economic activity of the enterprise.

C2 - be able to work in a team, correctly defend your point of view, and offer new solutions.

CC3 - skills of daily acquisition of new knowledge necessary for professional activity.

D – personal abilities

D1 - compliance with the standard of business ethics, possession of ethical and moral standards of behavior.

D2-ability to find a compromise, correlate your opinion with the opinion of the team D3-know social and ethical values based on public opinion, traditions, customs, and social norms and be able to navigate them in their professional activities.

Completion competencies

	General Cultural competencies (CA)
OK 1	Ability to communicate in oral and written forms in the state, Russian and foreign languages to solve problems
	of interpersonal and intercultural interaction
OK 2	Understanding and practical use of healthy lifestyle standards, including prevention issues, the ability to use
	physical culture to optimize performance
OK 3	Ability to analyze the main stages and patterns of historical development of society for the formation of civil
OK 4	Ability to use the basics of philosophical knowledge to form a worldview position
OK 5	Ability to critically use the methods of modern science in practical activities
OK 6	Awareness of the need and acquisition of the ability to independently learn and improve their skills throughout their working life
OK 7	Knowledge and understanding of professional ethical standards, proficiency in professional communication
	techniques
OK 8	Ability to work in a team tolerant perception of social, ethnic, confessional and cultural differences
OK 9	Ability to use the basics of economic knowledge in various fields of activity
	General Professional competencies (GIC)
OPK-1	Ability to acquire new knowledge with a high degree of independence using modern educational and information technologies
OPK-2	Possession of computer skills sufficient for professional activity with basic programming
OPK-3	Knowledge of the main methods, methods and means of obtaining, storing, processing information, the ability
	to use modern technical means and methods for solving communication problems. information technologies
	using traditional information carriers, distributed knowledge bases, as well as information in global computer
	networks

OPK-4	Understanding of the essence and significance of information in the development of modern society, the ability
	to receive and process information from various sources, the willingness to interpret, structure and formalize
	information in a form accessible to others
OPK-5	Ability to solve standard problems professional activity based on information and bibliographic culture with
	the use of information and communication technologies and taking into account the basic requirements of
	information security
	Professional competencies (PC)
PC 1	Ability to systematically study scientific and technical information, domestic and foreign experience in the relevant training profile
PC 2	Ability to take part in the preparation of scientific reports on the completed task and implement the results of
102	research and development in the field of technological machines and equipment
PC 3	Ability to participate in work on innovative projects using basic research methods
DC 4	
PC 4	Ability to model technical objects and technological processes using standard packages and computer-aided design tools, willingness to conduct experiments using specified methods with processing and analysis
of PC 5	Possession of approaches and methods of critical analysis, the ability to use in practice with regard to various
results	forms and processes of technological processes of
SC 6	the Ability to learn a new technique, technological and technical documentation make adjustments with respect
	to operating conditions
7 PC	the Ability to participate in work on the calculation and design of details and units of technological machines
DC 0	in accordance with the technical tasks and use the standard tools of design automation
PC 8	Ability to conduct patent research to ensure the novelty of the new design solutions and their patentability and the identification of indicators of technical level of engineered products
PC 9	Ability to explore and optimize the modes of operation of technological machines during their operation
PC 10	the Ability to pre-technical-economic justification of design solutions
PC 11	the Ability to design technical equipment jobs with accommodation of technological equipment, the ability to learn the input equipment
PC 12	the Ability to participate in work on fine-tuning and development of technological processes during the
	preparation of the production of a new product, to check the quality of the installation and commissioning
	testing and commissioning of new types of products, components and parts manufactured products
PC 13	the Ability to check the technical condition and residual life of process equipment, arrange a routine inspection and maintenance of technological machines and equipment
DC 14	the Ability to correct out activities for the provention of accurational accidents and accurational discusses to
FC 14	monitor compliance with environmental safety of the operations
PC 15	the Ability to choose the main and auxiliary materials, methods of implementation of technological processes,
	to apply advanced methods of operation of technological equipment
PC 16	to Wield the main methods of calculation of parameters of technological equipment, the method of their
	selection on the directories and catalogs.

4. Passport of the educational program

4.1. General information

N⁰	Field name	Note
1	Code and classification of the field of	6B07 «Engineering, manufacturing and civil engineering»
	education	
2	Code and classification of training	6B071 «Engineering and engineering trades»
	directions	
3	Educational program group	B064 «Mechanics and metal working»
4	Educational program name	"Predictive technologies and machine diagnostics»
5	Short description of educational	Educational program "Reliability and predictive
	program	maintenance of technological machines and equipment" in
		the following industries:
		- metallurgical machinery and equipment;
		- mining machinery and equipment;
		- machinery and equipment of the oil and gas industry;
6	Purpose of EP	The purpose of the educational program is to provide
		comprehensive and high-quality training of competitive,
		highly qualified specialists who are ready to solve
		practical and theoretical problems in predictive
		diagnostics in professional activities in modern conditions
		based on digital maintenance systems.
7	Type of EP	Innovative EP
8	The level based on NQF	6
9	The level based on IQF	6
10	Distinctive features of EP	no
11	List of competencies of educational	QC 1. Communication
	program	QC 2. Basic literacy in the natural sciences
		QC 3. General engineering competencies
		QC 4. Professional competencies
		QC 5. Engineering and computer competencies
		QC 6. Engineering and working competencies
		QC 7. Socio-economic competencies
10		QC 8. Special professional competencies
12	Learning outcomes of educational	LOI : Apply the basic patterns and forms of regulation of
	program	social behavior, the rights and freedoms of man and
		citizen, demonstrating respect for people, tolerance for
		another culture, readiness to maintain partnerships
		LO2. Demonstrate knowledge and skins of sections of
		related disciplines and apply them to solve angingering
		problems in the field of predictive technologies and
		machine diagnostics
		LO3 : Assign materials and design a technological process
		and methods for manufacturing basic technological parts
		elements and assemblies using advanced methods for
		obtaining machine narts
		LO4 : Analyze and choose the main methods methods
		and means of obtaining storing processing special
		information, know the basics of programming for

		database management, be able to use digital data to solve
		communication problems for modern technical systems
		and the use of information technologies for the use of
		global information networks
		LO5: Regulate the procedure and procedure for
		installation and commissioning during testing and
		operation of the diagnosed equipment. Assess the
		technical condition and residual life of process
		equipment, organize routine inspection and maintenance
		of equipment using diagnostic tools, process the results of
		system measurements
		LO6: Apply effective progressive methods to develop
		low-waste, energy-saving technologies that ensure the
		safety of people's life and protect them from the possible
		consequences of accidents, catastrophes and natural
		disasters, ways of rational use of raw materials, energy
		and other types of resources
		LO7: Apply knowledge of economic laws, labor
		protection and environmental standards, rules of moral
		development, culture of academic integrity at a
		professional level
		LO8 : Apply standard calculation methods in the design of
		parts and assemblies of technological machines and
		welded structures. Use standard design automation tools
		in calculations
		LO9: Possess regulatory, economic and organizational
		knowledge when conducting business in the conditions of
		the Kazakh economy. Know professional ethics, ethical
		codes, generally accepted business rules. Know the
		concept, content and types of corruption
		LO10: Demonstrate the knowledge and skills necessary
		to ensure the reliability of technological machines,
		advanced technological processes and methods of
		operation of technological equipment, the quality of
		products and objects
		LO11: Demonstrate knowledge and skills in the field of
		dynamics, reliability and technical diagnostics of
		technological machines of the main and auxiliary
		production
		LO12: Apply knowledge in the field of operation and
		repair of machinery and equipment for the integrated
		management and monitoring of industrial production
		LO13: Formulate system knowledge for independent
		research in the field of predictive analysis of machinery
		and equipment. Analyze theoretical and experimental
		research in order to modernize or create new methods
		LO14 Possess scientific and practical knowledge in the
		field of operation to solve current engineering and
		scientific problems in the field of quality, operational
		properties and rational use of diagnostic devices
13	Education form	full
14	Period of training	4 years

15	Amount of credits	240
16	Languages of instruction	Kazakh/Russian
17	Academic degree awarded	Bachelor of Engineering and Technology

4.2. Relationship between the achievability of the formed learning outcomes based on educational program and academic disciplines

	English)	information processes, about new information technologies, local and global computer networks, methods of information protection; to acquire skills in using text editors and tabular processors; to create databases and various categories of application programs								
4	History of Kazakhstan	The course studies historical events, phenomena, facts, processes that took place on the territory of Kazakhstan from ancient times to the present day. The sections of the discipline include: the steppe empire of the Turks; early feudal states on the territory of Kazakhstan; Kazakhstan during the Mongol conquest (XIII century), medieval states in the XIV-XV centuries. The epoch of the Kazakh Khanate XV-XVIII centuries. Kazakhstan as part of the Russian Empire, Kazakhstan during the Great Patriotic War, during the formation of independence and at the present stage	5	v						
5	Philosophy	Philosophy forms and develops critical and creative thinking, worldview and culture, provides knowledge about the most general and fundamental problems of existence and gives them a methodology for solving various theoretical and practical issues. Philosophy expands the horizon of vision of the modern world, forms citizenship and patriotism, promotes	5	v						

		self-esteem, awareness of the value of human existence. It teaches you to think and act correctly, develops practical and cognitive skills, helps you to search and find ways and ways of living in harmony with yourself, society, and the world around you								
6	Module of socio- political knowledge (sociology, political science)	The study of the course contributes to the formation of students' theoretical knowledge about society as an integral system, provides the political aspect of training a highly qualified specialist on the basis of modern world and domestic political thought. The discipline is designed to improve the quality of both general humanitarian and professional training of students. Knowledge in the field of sociology and political science is necessary to understand political processes, to form a political culture, to develop a personal position and a clearer understanding of the measure of one's responsibility.	3	v						
7	Module of socio- political knowledge (cultural studies, psychology)	The module of socio-political knowledge (cultural studies, psychology) is designed to familiarize students with the cultural achievements of mankind, to understand and assimilate the basic forms and universal patterns of formation and development of culture. During the course of cultural studies, general problems of the theory of	5	v						

		culture, leading cultural concepts, universal patterns and mechanisms of formation and development of culture, the main historical stages of the formation and development of Kazakh culture are considered. The regularities of the emergence, development and functioning of mental processes, states, properties of a person engaged in a particular activity the regularities											
		of the development and functioning of											
		the psyche as a special form of vital											
		activity are also studied											
Cycle of general education disciplines

_		integrals, methods of their calculation.											
		Certain integrals and applications of											
		certain integrals. Improper integrals.											
		Theory of numerical and functional											
		series. Taylor and Maclaurin series.											
		application of series to approximate											
		calculations											
		Purpose: To develop students'	5		v				v				
	L	knowledge of drawing construction	-										
16	Engineering and	and skills in developing graphical and											
	computer graphics	textual design documentation in											
		accordance with standards. Content:											

		Students will study ESKD standards, graphic primitives, geometric constructions, methods and properties of orthogonal projection, Monge's projection, axonometric projections, metric tasks, types and features of connections, creating part sketches and assembly drawings, detailing, and creating complex 3D solid objects in AutoCAD.									
17	Fundamentals of the specialty	The purpose of studying the discipline is to form students' understanding of the basics of mining and metallurgical and oil and gas production, extraction, processing and transportation of minerals, machinery and equipment used in the mining and metallurgical and oil and gas industry. During the study, students will be introduced to the technological processes and the main equipment of the mining and metallurgical and oil and gas industries, the main methods of maintenance, the principles of predictive analytics of equipment.	5		v					v	
18	Thermodynamics, heat transfer and thermal engineering installations	The main issues and methods for obtaining, converting, transferring and using thermal energy, the fundamental principles of operation and schemes of heat engineering installations, to teach how to evaluate and compare the energy and economic indicators of heat power plants, to effectively use the means of production in	5	v		v			v		

		technological processes. The study of the physical foundations, devices, principle of operation and technical characteristics of the main and auxiliary heat and power equipment and systems.									
19	Theoretical and applied mechanics	To involve students in the development and solution of tasks that help bridge the gap between scientific theory and engineering practice.Contents_ Theoretical mechanics, theory of mechanisms and machines. Theoretical mechanics deals with the general laws of mechanical movements of material bodies and the mechanical interactions between them. In the theory of mechanisms and machines, general methods of research, construction, and kinematics of mechanisms and machines are studied	5	v			v				
20	Basics of hydraulics and hydraulic drives of technological machines	Application of knowledge in the field of technical fluid mechanics (hydraulics), for the calculation of hydraulic pressure systems, hydraulic machines, hydraulic and pneumatic actuators, widely used in the oil industry. Full hydraulic calculation of various hydraulic systems, hydraulic and pneumatic equipment drives. Getting the basics of knowledge in the field of hydraulics - theoretical fluid mechanics in the field of hydraulic and pneumatic actuators.	5	v					v		

				 		-				
21	Strength of materials	_to independently calculate structural elements, mechanisms and machine parts. Contents_ Stretching and compression. Stresses in cross sections and deformations of a straight rod. Mechanical properties of materials under tension and compression. Calculation of tensile and compressive strength and stiffness. Geometric characteristics of flat sections. Shear and torsion. Calculation of strength and torsional stiffness. The bend. Normal and tangential bending stresses_	5	v			v			
22	Metrology, standardization and technical measurements	The discipline of Metrology, standardization and technical measurements is one of the basic disciplines aimed at developing scientifically based skills for students to control, apply and meet the requirements of standards in force in the Republic of Kazakhstan in the production and repair of machine parts. Solving the problems of the basics of interchangeability and certification of engineering products. To form a system of competencies of a future specialist in the field of production and repair technologies, by studying the basics of the theory of standardization, metrology and certification to solve the tasks of professional activity.	6		V			v		

23	Construction materials processing machinery and equipment	The solution of the most important technical problems associated with the creation and development of the most economical materials, increasing the accuracy, reliability and performance of mechanisms and devices depends largely on the development of materials science and technology for producing and processing materials, concretization of knowledge about the relationship between the composition, structure and properties of materials used for management of the structure and properties of structural materials.	5			v		v				
24	Industrial economics	Purpose: To provide students with an understanding of the basic principles and factors affecting industrial economics, including the organization of production, the competitiveness of enterprises, and the impact of government policy. Content: study the structure and dynamics of industrial production, analyze the main factors affecting the efficiency of enterprises, including technological innovation, factors of production and competition. Examination of the role of public policy in industrial development and industrial safety issues.	5				v		v			
25	Bases of designing and details of cars	Purpose: to acquire knowledge of calculations and design of machine parts and assemblies, taking into account the criteria of strength, reliability and stability.Contents_	5		v			v				

		general principles of design and									
		construction, construction of models									
		and calculation algorithms for									
		standard machine parts taking into

		minimizing the man-made impact of objects on environmental components. Forecasting, assessment of the consequences of man-made impacts on the components of the natural environment during the construction and operation of facilities. Classification, composition, sources of technogenic impact of objects. Technology of restoration and optimization of the state of components of the natural									
		environment									
28	Algorithmization and programming basics	The course explores the fundamental concepts of programming: operator, variable, procedure, function, data type. The main structures of algorithms are considered, such as linear, branched, cyclic. The course examines the basic forms of data representation: strings, structures, arrays, lists. Separate topics are devoted to the creation of widely used sorting algorithms, searching for the minimum and maximum values in an array, string processing, iterative and recursive algorithms, building flowcharts of algorithms and developing programs based on them.	4	v	V						
29	The dynamics and durability of technological machines	Students study the criteria for calculating technological machines and structures for strength. To learn the formulation and analysis of calculation results, the ability to	4				v		v		

		determine operating stresses, to master a number of accurate and approximate methods for determining the characteristics of operational loads, considering the bearing capacity of parts and structures as a random variable, to be able to calculate dynamic loads in drives and other parts of technological machines								
30	Technology of manufacturing technological machines	Mastering the discipline is based on the study of the methodology for calculating the economic efficiency of the method of obtaining blanks, normalizing operations; application of operations design methodology; methods for calculating the minimum allowances, cutting conditions, the required amount of technological equipment, methods for ensuring the specified accuracy of manufacturing parts, technological processes for the production of standard parts and assemblies of machines and equipment.	5		v		V			
31	Technical diagnostics of technological machines	The course is aimed at studying the theoretical foundations of technical diagnostics and obtaining practical skills in the use of non-destructive testing methods to assess the technical condition of technological machines and equipment; to familiarize students with the basics of the theory of technical diagnostics, types of technical condition. controlled	4					V	v	V

		parameters, technical diagnostics systems; to study the physical foundations of non-destructive testing methods for detecting and diagnosing malfunctions of technological equipment; familiarization with equipment for non-destructive testing, test methods, acquisition of practical skills Microcontroller Programming This course is intended for students to study the current state of microprocessor and microcontroller control systems. The	5		v	v						
32	Microcontroller programming	purpose of the course is the formation of bachelor's knowledge on the principles of building digital data processing tools, the features of the organization of the work of microprocessor devices and the use of microprocessors in control systems of technical objects. As part of the course, the student will master the microcontrollers of the AVR family. AVR command system. Means of input/output in microprocessor systems. Programming of microprocessor systems.										
		Cycle	e of basic mnonent	discij of ch	plines bice							
	<u> </u>	Students study the basics of well	5						v	V

33	production	production. Acquisition of skills for										
_	technologies	competent choice of the method of										
		opening productive objects, designing										

		the design of wells, choosing methods									
		for influencing the productive									
		formation, calculating the modes of									
		operation of the "well-formation"									
		system. The study of techniques and									
		technologies used in the oil and gas									
		industry, methods of construction and									
		operation of wells, collection and									
		preparation for transportation of oil									
		and gas in the fields, underground gas									
		storage. Acquisition of skills in									
		calculating wells, the need for									
		materials for the preparation of drilling									
		fluid, drilling mode parameters,									
		physical properties of oil and gas, gas									
		well flow rates.									
		The aim of the course is to contribute	5					v	v		
		to the development of scientific and									
		technical thinking and the acquisition									
		by students of the necessary									
		knowledge and practical skills in the									
		field of technology of stripping and									
		mining operations in open									
		development Objectives of the course:									
		study of the level of mining and the									
34	Mining technologies	need for them in the national									
		economy, information about mineral									
		deposits and the condition of their									
		occurrence; familiarization with the									
		methods of mining and prospects for									
		their development; the essence of									
		underground mining and the main									
		mine workings; the main production									
		processes and technical and economic									

		opening and systems development of mineral deposits; basic technological									
		processes.									
		The purpose of teaching the discipline	5					v	v		
		is to give students in-depth knowledge									
		about the basic theoretical and									
		technological provisions of the									
		production of ferrous and non-ferrous									
		metals; the ability to solve complex									
		technological problems; to have the									
		skills of independent work on the									
		organization and management of									
		experimental studies of technological									
	T 1 1 f	processes at existing metallurgical									
25	rechnologies of	units and promising experimental and									
33	metallurgical	pilot industrial complexes. The									
F	production	objectives of studying the discipline									
		are to master the general laws of									
		processes occurring in ferrous and									
		non-ferrous metallurgy units; to									
		master methods for calculating the									
		charge, material and thermal balances									
		of the process, intensification of									
		technological processes and control of									
		melting; to get acquainted with									
		promising technologies in metallurgy,									
		including hydrometallurgy.									
		Discipline studies the role of science	5	v						v	v
		in material production, economics,									
		politics, management and in the									
36	Fundamentals of	education system and other areas of									
	Scientific Research	society. New tendencies in									
		construction, as well as modern									
		methods for solving research and									

				-	 		 			 	 	
		professional problems. The current state of science, experimental research.										
		The latest instruments and equipment										
		for experimental research; The										
		theoretical basis for the formation of										
		scientific research in the field of										
		construction, as well as legislative										
		acts, ethical and legal norms and										
		regulatory materials in the										
		organization and conduct of scientific										
		research. Methods for conducting										
		experimental studies of various types										
		of structures;										
		Purpose: the goal is to form a holistic	5	v					v			
		understanding of the system of legal										
		regulation of intellectual property,										
		including basic principles,										
		mechanisms for protecting intellectual										
		property rights and features of their										
37	Legal regulation of	implementation. Content: The										
01	intellectual property	discipline covers the basics of IP law,										
		including copyright, patents,										
		trademarks, and industrial designs.										
		Students learn how to protect and										
		manage intellectual property rights,										
		and consider legal disputes and										
		methods for resolving them.					 					
		Purpose: to familiarize students with	5			v					v	v
		the basic concepts, methods and										
20	Fundamentals of	technologies in the field of artificial										
38	Artificial Intelligence	intelligence: machine learning,										
50	0	computer vision, natural language										
		processing, etc. Contents: general										
		definition of artificial intelligence,										

		intelligent agents, information retrieval and state space exploration, logical agents, architecture of artificial intelligence systems, expert systems, observational learning, statistical learning methods, probabilistic processing of linguistic information, semantic models, natural language processing systems.									
39	Drilling machines and complexes	The construction of equipment for drilling wells for the purpose of oil and gas production, the device and the main directions of further development of drilling machines and systems in accordance with the trends of global technical progress. Evaluating the effectiveness of machinery and equipment for choosing a rational way of their operation The technical level, ways to improve the design, methods of operation of drilling machines and systems.	5					*	Ŷ		
40	Mining machinery and equipment	Pneumatic and hydraulic drilling rigs for drilling holes and wells. Charging machines and installations. Designs of loading machines of cyclic and continuous action and excavators. Traction calculations. Machines and complexes for tunneling and cleaning works. Machines and equipment for vertical and inclined workings and shafts. Inspection and maintenance of the roof of mines and workings.	5					v	v		

41	Fundamentals of sustainable development and ESG projects in Kazakhstan	Purpose: the goal is for students to master the theoretical foundations and practical skills in the field of sustainable development and ESG, as well as to develop an understanding of the role of these aspects in the modern economic and social development of Kazakhstan. Contents: introduces the principles of sustainable development and the implementation of ESG practices in Kazakhstan, includes the study of national and international standards, analysis of successful ESG projects and strategies for their implementation in enterprises and organizations.	5	v				v				v
42	Technological lines and complexes of metallurgical production	The course provides students with the necessary knowledge about the scale of metallurgical production and the continuity of its constituent processes, patterns of construction and trends in the development of technological lines of metallurgical production, necessary for production, design and research activities. Students' mastering of technologies for obtaining various metals, starting with enrichment and ending with metalworking processes by pressure, the structure of existing technological lines and complexes of metallurgical workshops and prospects for the development of metallurgical production, the principle of choosing machines and mechanisms, determining the required number of	5						v	v		

		them for lines and complexes of										
		metallurgical workshops										
		Cycle	of profile	e disci	plines							
		Uni	versity co	ompor	nent		_	 				
43	Installation and repair of technological machines	The acquisition by students of theoretical knowledge and practical skills on the basics of designing technological processes for the repair and restoration of worn parts, assembly units, machines and equipment; Determination of optimal modes of performance of production processes; quality control of repair of machines and equipment. Organization and engineering support of high-quality installation of equipment, methods of mechanization and automation of technological processes and rules for safe work	5								v	
44	Instrumentation and automation of technological machines	Formation of the future specialist knowledge of the design of devices, their purpose and principles of operation. As well as special training of engineering and technical personnel with scientific and practical knowledge in the field of operation, as it solves relevant engineering and scientific problems in the field of quality, performance properties and rational use of fuels, oils, lubricants and technical fluids.	5						v			v
45	Fundamentals of reliability of	The course provides students with knowledge and skills that provide a creative approach to solving problems	5						v	v		

	technological	of reliability and durability of									
	machines	technological machines and equipment									
		necessary to increase the level of									
		automation, reduce huge repair costs									
		from machine downtime, and ensure									
		safety during equipment operation.									
		When studying disciplines, students									
		master the issues of ensuring the									
		reliability and durability of									
		technological equipment; principles of									
		rational use of technical parameters of									
		technological machines									
		Formation of future specialist	5				v			v	v
		knowledge on the design of diagnostic									
		devices, their purpose and principles									
		of operation directly at the place of									
		production work, the use of devices									
	Coomonitoring of the	for their intended purpose, assessment									
	technical condition of	of the state of equipment, as well as									
46	technological	special training of engineering and									
	machines	technical personnel with scientific and									
	machines	practical knowledge in the field of									
		operation, t.To. it solves topical									
		engineering, technical and scientific									
		problems in the field of quality,									
		operational properties and rational use									
		of these devices.									
		Cycle	of profile	e disci	plines	5

		methods of influence on the reservoir in order to increase its oil recovery. Collection system, preparation of well production. Equipment for maintaining reservoir pressure and oil displacement from productive formations								
48	Mining and transport machines	As part of the course, students study the principles of operation and design of mining and transport machines; classification and purpose of machines for mining and transportation of minerals; schematic diagrams, design features, applications and basic design characteristics of various machines for breaking, loading, transportation, fastening and other auxiliary operations; methods for determining the main structural and operational parameters of mining and transport machines, their productivity and efficiency in mining production	5		v			v		
49	Equipment for metallurgical plants	General characteristics of the mechanical equipment of an iron and steel industry. Classification of the equipment on a fuctioning of drives in a cycle of working hours. The crushing equipment. The common data on process of crushing. Types of crushing ma-chines. Calculation of crushers. Chopper the equipment. The common data and classification of mills. Calculation of key parameters. The equip¬ment of a uniform feed of	5		v			v		

		technological machines. Types, the								
		device, calculation of key parameters.								
		The equipment for enrichment. The								
		necessary mechanical equipment.								
		Calculation of key parameters. The								
		equipment for drying concentrates								
		"Design and construction of oil and	5		v			v		
		gas machines" gives students the								
		following knowledge and skills:								
		knowledge of basic oil and gas								
		machines, mechanisms and								
		equipment; knowledge of the design								
		conditions and basic requirements for								
		oil and gas machines and equipment;								
		knowledge of labor protection and								
		environmental issues; ability to choose								
	Design and	equipment according to the operating								
50	construction of oil	conditions of oil fields; ability to								
	and gas machines	choose the operating mode of								
		equipment, maintenance and routine								
		repairs; the ability to perform								
		verification calculations of load								
		capacity, performance, pressure,								
		temperature; skills in using scientific,								
		technical and reference literature,								
		determining the technical								
		characteristics of machines and								
		equipment and evaluating their								
		technical and economic efficiency.								
		In the academic discipline the student	5		v			v		
	Design and	studies the basics of computer-aided								
51	construction of	design of mining, transportation								
	mining machines	vehicles and stationary installations;								
		methods and techniques for								

		developing tools for interactive								
		documentation and tools for teamwork								
		on the project. The fundamentals of								
		designing and modifying parts and								
		units of machines and installations are								
		considered. Students get knowledge in								
		the field of creating machines and								
		installations, documentation design,								
		interactive electronic technical guides.								
		The purpose of the study: Encouraging	5		v			v		
		students to make the right choice of								
		design, stages of implementation,								
		review and approval of design								
		documentation; method of								
		organization and execution of design								
		work; methodology of designing of								
		metallurgical machines and units.								
		Summary: Contents and stages of								
		development of machine-building								
		products. The order of development,

65	Organization, planning and management of the repair of oil and gas machines	Forms and methods of organizing and managing the repair and maintenance of oil and gas equipment, features of the formation and organization of the work of services; basic methods of operation and repair of equipment; get acquainted with the rules for the formation of production units, their structure and the procedure for recruiting teams. Organization of production processes of structural divisions, forms and rules of interaction with third-party enterprises, specialization and cooperation in production activities. Knowledge of these features will help the specialist quickly adapt to practical activities, master the skills of conducting efficiency analysis and coordinating the activities of various departments.	5		V		V	V	
66	Organization, planning and management of the repair of mining machines	Forms and methods of organizing and managing the repair and maintenance of mining equipment, features of the formation and organization of the work of services; basic methods of operation and repair of equipment; get acquainted with the rules for the formation of production units, their structure and the procedure for recruiting teams.
