1. Description of educational program

The educational program for the preparation of a Doctor of Philosophy PhD has a scientific and pedagogical focus and involves fundamental educational, methodological and research training and in-depth study of problems and various processes in the relevant areas of science for the system of higher and postgraduate education and the scientific sphere.

A doctoral student in the direction of training "Robotics and Mechatronics" should be prepared for solving professional problems in accordance with the profile direction of the doctoral program and types of professional activities:

design and engineering activities:

- analysis of the state of the scientific and technical problem and the definition of goals and objectives for the design of robotic and mechatronic systems based on the study of world experience;

- making decisions based on the results of calculations for projects and the results of a technical-economic and functional-cost analysis of the effectiveness of the designed robotic and mechatronic systems;

production and technological activities:

- development of methods for conducting theoretical and experimental research on the analysis, synthesis and optimization of the characteristics of materials used in the field of robotics and mechatronics;

- solving economic and organizational problems of technological preparation of the production of robotic and mechatronic systems and the choice of systems for ensuring the environmental safety of production;

research activities:

- construction of mathematical models for the analysis and optimization of research objects, the choice of a numerical method for their modeling or the development of a new algorithm for solving the problem;

- development and optimization of field experimental studies of robotic and mechatronic systems, taking into account the criteria of their reliability;

- preparation of scientific and technical reports, reviews, publications based on the results of research performed;

- application of the results of research activities and the use of rights to objects of intellectual property;

organizational and management activities:

- finding optimal solutions in the creation of science-intensive products, taking into account the requirements of quality, cost, deadlines, competitiveness, life safety, as well as environmental safety;

- support of a unified information space for planning and enterprise management at all stages of the life cycle of manufactured products;

- development of plans and programs for organizing innovative activities at the enterprise.

- deep knowledge and understanding of fundamental phenomena in their field of science.

scientific and pedagogical activity:

- development of programs of academic disciplines and courses based on the study of pedagogical, scientific, technical and scientific-methodical literature, as well as the results of their own professional activities;
- setting up and modernization of individual laboratory works and workshops in professional disciplines;
- conducting training sessions with students, participating in the organization and management of their practical and research work;
- application and development of new educational technologies, including computer and distance learning systems.

Objects of professional activity

- teaching activities in higher educational institutions according to the profile of training;
- research activities in higher educational institutions and scientific organizations according to the profile of training;
- professional activity in the field of robotics and mechatronics, requiring highly qualified personnel;
- administrative and organizational activities in higher educational institutions and scientific organizations on the profile of training.

The main criterion for the completeness of the educational process for the preparation of doctors of philosophy PhD (doctor in the profile) is the mastering of at least 180 academic credits by a doctoral student, including all types of educational and scientific activities.

The term of study in doctoral studies is determined by the amount of acquired academic credits. Upon mastering the established amount of academic credits and achieving the expected learning outcomes for obtaining a Ph.D. degree or by profile, the doctoral educational program is considered fully mastered and completed with the successful defense of a doctoral dissertation prepared in compliance with the existing rules.

Training of personnel in doctoral studies is carried out on the basis of educational programs in two directions:

- 1) scientific and pedagogical with a training period of at least three years;
- 2) specialized with a training period of at least three years.

Final certification is carried out in the form of writing and defending a doctoral dissertation

2. Purpose and objectives of educational program

Purpose of EP: Ensuring the training of highly qualified specialists and researchers capable of developing advanced intelligent technologies in robotics and mechatronics, integrating sustainable development principles and digital technologies into modern automated systems.

Tasks of EP:

- the direction of its activities to contribute to the development of a knowledge-based society by providing educational programs in the system of continuing education;
- development of students through research activities, critical thinking, development of professionally oriented skills and abilities;
- the use of highly professional experience in teaching doctoral students in a variety of educational environments;
- training a new competitive generation of technical specialists for the labor market;
- developing an environment that welcomes and supports people from different cultures, and creating an atmosphere of pursuit of knowledge, academic integration and intellectual motivation;
- carrying out research work, conducting educational activities based on the best world practice, and developing its own school for training specialists;
- development of cooperation "university-industry" to meet the labor market requirements for technical specialists, to improve the quality of educational programs for training specialists for the national industry and the economy and business sector;
- development of additional educational and training programs using multimedia and new teaching technologies for organizing learning on the basis of lifelong learning;
- establishing partnerships with other universities, organizations in order to improve the quality of education, to support technical and cultural ties.

Competencies at the end of training

Universal, social and ethical competencies (USEC)	
U-1	Have an idea of the pedagogical and scientific ethics of a research scientist
U-2	Have an understanding of the norms of interaction in the scientific community
U-3	to Know and understand the methodology of scientific knowledge
U-4	Ability to critically use the methods of modern science in practical activities
U-5	generate your own new scientific ideas, communicate your knowledge and ideas to the scientific community, expanding the boundaries of scientific knowledge
Special and managerial competencies (S&MC)	
S-1	Independently manage and control the processes of labor and educational activities within the framework of the strategy, policy and goals of the organization, discuss problems, argue conclusions and competently operate with information
S-2	Organize the activities of the production team, make organizational and managerial decisions in the context of different opinions and evaluate the consequences of decisions

S-3	ToTo conduct independent scientific research, characterized by academic integrity, based on modern theories and methods of analysis
S-4	Readiness to lead and participate in the preparation of a feasibility study of projects for creating robotic and mechatronic systems, their subsystems and individual modules
S-5	Ability to critically analyze, present, protect, discuss and disseminate the results of their professional activities
Professional competencies (PC)	
PC-1	Analyze the state of scientific and technical problems and determine the goals and objectives of designing robotic and mechatronic systems based on the study of the world experience
PC-2	Decision-making based on project calculations and results of technical-economic and functional-cost analysis of the effectiveness of projected robotic and mechatronic systems
PC-3	Develop a methodology for conducting theoretical and experimental studies on the analysis, synthesis and optimization of the characteristics of materials used in the field of robotics and mechatronics
PC-4	Build mathematical models for analyzing and optimizing research objects, choose a numerical method for modeling them, or develop a new algorithm for solving
PC-5	Find optimal solutions for creating high-tech products, taking into account the requirements of quality, cost, deadlines, competitiveness, life safety, and environmental safety
PC-6	Develop curricula of academic disciplines and courses based on the study of pedagogical, scientific, technical and scientific-professional activities in the field of robotics and mechatronics

3. Requirements for evaluating the educational program learning outcomes

Requirements for Completion of Studies and Obtaining a Diploma Persons who have mastered the educational program of doctoral studies and defended a doctoral dissertation, subject to a positive decision of the dissertation councils of the higher education institution with special status or the Committee for Control in the Sphere of Education and Science of the Ministry of Education and Science of the Republic of Kazakhstan based on the results of the examination, are awarded the degree of Doctor of Philosophy PhD or doctor in the profile and are issued a state diploma with an appendix (transcript). Persons who have received the degree of PhD, in order to deepen their scientific knowledge, solve scientific and applied problems on a specialized topic, complete a postdoctoral program or conduct scientific research under the supervision of a leading scientist chosen by the higher education institution.

3.1 Requirements for the key competencies of doctoral graduates:

1) have an idea of: – the main stages of development and paradigm shifts in the evolution of science; – the subject, ideological and methodological specifics of the natural (social, humanitarian, economic) sciences; – about scientific schools of the relevant field of knowledge, their theoretical and practical developments; – about scientific concepts of world and Kazakhstani science in the relevant field; – about the mechanism of implementation of scientific developments in practical activities; – about the norms of interaction in the scientific community; – about the pedagogical and scientific ethics of a research scientist;

2) know and understand: – modern trends, directions and patterns of development of domestic science in the context of globalization and internationalization; – the methodology of scientific knowledge; – achievements of world and Kazakhstani science in the relevant field; – (be aware of and accept) the social responsibility of science and education; – perfectly speak a foreign language for scientific communication and international cooperation;

3) be able to: – organize, plan and implement the process of scientific research; – analyze, evaluate and compare various theoretical concepts in the field of research and draw conclusions; – analyze and process information from various sources; – conduct independent scientific research, characterized by academic integrity, based on modern theories and methods of analysis; – generate their own new scientific ideas, communicate their knowledge and ideas to the scientific community, expanding the boundaries of scientific knowledge; – select and effectively use modern research methodology; – plan and forecast their further professional development;

4) have the skills of: – critical analysis, evaluation and comparison of various scientific theories and ideas; – analytical and experimental scientific activity; – planning and forecasting research results; – oratory and public speaking at international scientific forums, conferences and seminars; – scientific writing and scientific communication; – planning, coordination and implementation of scientific research processes; – systemic understanding of the field of study and demonstrate

the quality and effectiveness of the chosen scientific methods; – participation in scientific events, fundamental scientific domestic and international projects; – leadership management and team management; – responsible and creative attitude to scientific and scientific-pedagogical activities; – conducting patent searches and experience in transferring scientific information using modern information and innovative technologies; – protection of intellectual property rights to scientific discoveries and developments; – free communication in a foreign language;

5) be competent: – in the field of scientific and scientific-pedagogical activity in the context of rapid renewal and growth of information flows; – in conducting theoretical and experimental scientific research; – in setting and solving theoretical and applied problems in scientific research; – in conducting a professional and comprehensive analysis of problems in the relevant field; – in matters of interpersonal communication and human resources management; – in matters of university training of specialists; – in conducting an examination of scientific projects and research; – in ensuring continuous professional growth.

3.2 Requirements for the research and development work of a student in a Doctor of Philosophy PhD program:

1) compliance with the main issues of the doctoral educational program, on which the doctoral dissertation is defended;

2) is relevant and contains scientific novelty and practical significance;

3) is based on modern theoretical, methodological and technological achievements of science and practice; 4) is based on modern methods of processing and interpreting data using computer technologies;

5) is performed using modern methods of scientific research;

6) contains research (methodological, practical) sections on the main provisions being defended.

3.3 Requirements for the organization of practices: Practice is conducted with the aim of developing practical skills in scientific, scientific-pedagogical and professional activities. The educational program of doctoral studies includes:

1) pedagogical and research practice - for students in the PhD program;

2) industrial practice - for students in the specialized doctoral program. During the period of pedagogical practice, doctoral students are involved, if necessary, in conducting classes in the bachelor's and master's degrees. Research practice of a doctoral student is conducted with the aim of studying the latest theoretical, methodological and technological achievements of domestic and foreign science, as well as consolidating practical skills, applying modern methods of scientific research, processing and interpreting experimental data in dissertation research. Industrial practice of a doctoral student is conducted in order to consolidate theoretical knowledge obtained during the training process and to improve professional level. The content of research and industrial practice is determined by the topic of the doctoral dissertation. Generally mandatory standard requirements for completing doctoral studies and awarding a PhD degree: mastering at least 110 academic credits of theoretical training and preparation for passing the state exam in the specialty and defending the dissertation.

4. Passport of educational program

4.1. General information

Nº	Field name	Comments
1	Code and classification of the field of education	8D07 «Manufacturing and processing industries»
2	Code and classification of training directions	8D071 «Engineering and engineering trades»
3	Educational program group	D102 «Robotics and mechatronics»
4	Educational program name	8D07106 «Robotics and Mechatronics»
5	Short description of educational program	Training of highly qualified specialists who are able to conduct research on innovative areas related to robotics and mechatronics' evolution that meets international standards and allows Kazakhstan to integrate into the global educational space. Graduates are awarded PhD degree.
6	Purpose of EP	The purpose of the educational program is ensuring the training of highly qualified specialists and researchers capable of developing advanced intelligent technologies in robotics and mechatronics, integrating sustainable development principles and digital technologies into modern automated systems
7	Type of EP	New
8	The level based on NQF	8
9	The level based on IQF	8
10	Distinctive features of EP	No
11	List of competencies of educational program	In the field of research methodology; in the field of scientific and scientific-pedagogical activity in higher educational institutions; in matters of modern educational technologies; in the implementation of scientific projects and research in the professional field; in the use of modern methods and technology of scientific communication in the state of foreign languages; in the field of planning and solving the problem of their own professional and personal development
12	Learning outcomes of educational program	EO1 - To analyze the state of the scientific and technical problem and the definition of the goals and objectives of the design of robotic and mechatronic systems based on the study of world experience. EO2 – Design modern reliable blocks and devices, intelligently controlling executive and information-sensor modules of robotic and mechatronic systems and complexes. EO3 – To determine the safety, environmental friendliness and economic efficiency of the implementation of the projected robotic and mechatronic systems, their individual modules and subsystems. EO4 – Development and optimization of autonomous control systems considering sustainable development, including intelligent control algorithms, reduced energy consumption, and the use of digital

		modeling in robotics and mechatronics. EO5 – Conduct independent research in the field of robotics and mechatronics and upgrade existing robotic and mechatronic systems, introduce new methods of digital signal processing with elements of artificial intelligence. EO6 – Demonstrate high professional qualities and ethics when interacting with various stakeholders.
13	Education form	full-time
14	Period of training	3 year
15	Amount of credits	180
16	Languages of instruction	russian, kazakh, english
17	Academic degree awarded	Doctor of Philosophy PhD
18	Developer and author	Ozhikenov K.A.

4.2. Relationship between the achievability of the formed learning outcomes based on educational program and academic disciplines

№	Discipline name	Short description of discipline	Amount of credits	Generated learning outcomes (codes)					
				EO1	EO2	EO3	EO4	EO5	EO6
Cycle of basic disciplines University component									
1.	Research methods	The training course allows you to gain knowledge on the basic theoretical provisions, technologies, operations, practical methods and techniques for conducting scientific research based on modern achievements of domestic and foreign scientists and master the skills of choosing a topic for scientific research, scientific research, analysis, experimentation, data processing, obtaining reasonable effective solutions using information technology.	5	v			v	v	
2.	Academic writing	Objective: to develop academic writing skills and writing strategies for doctoral students in engineering and natural sciences. Content: fundamentals and general principles of academic writing, including: writing effective sentences and paragraphs, writing an abstract, introduction, conclusion, discussion, and references; in-text citation; preventing plagiarism; and preparing a conference presentation.	5	v					v
3.	Pedagogical practice	The goal is for doctoral students to master the technology of higher education in the Republic of Kazakhstan, the economics of the educational system, the organization of education and its management. Within the framework of pedagogical practice, the following will be studied: the possession of teachers' best practices in the relevant field of science and the use of regulatory documents on the educational program.	10					v	v
Cycle of basic disciplines Component of choice									
4.	Microprocessor technology in Mechatronics and Robotics	The discipline is aimed at teaching the principles of control of mechatronic and robotic systems, at acquiring the skills to control various sensors and solve problems of microprocessor control. He studies the basic principles of building information-measuring systems and control systems based on open platforms of microcontrollers, develops skills in developing hardware and software for automated control systems and control of mechatronic and robotic systems.	5		v			v	

5.	Control systems of mechatronic and robotic complexes	The purpose of teaching the discipline is to systematize and integrate previously acquired knowledge in the special disciplines of master's training in relation to the tasks of designing control systems of multicomponent robotic and mechatronic complexes, developing the skills of integrated design of mechatronic systems.	5		v				
6.	Intellectual property and the global market	Purpose: the goal is to train specialists in the field of intellectual property law who can analyze and predict trends in its development in the global market, develop strategies for the protection and commercialization of intellectual property. Contents: global aspects of intellectual property and its role in international trade and economics, analysis of international agreements and conventions, IP management strategies, cases of protection and violation of intellectual property rights in various jurisdictions.	5	v					v
Cycle of profile disciplines University component									
7.	Research practice	The main purpose of the doctoral student's research practice is to study the latest theoretical, methodological and technological achievements of domestic and foreign science, as well as to consolidate practical skills in applying modern research methods, processing and interpreting experimental data in dissertation research.	10	v	v				
Cycle of profile disciplines Component of choice									
8.	Intelligent control of robotic systems	The discipline is aimed at studying the methods and means of modern information processing technology used in the synthesis of models of intelligent control systems to solve control problems for a poorly formalized object or a poorly formalized process of interaction with the external environment under conditions of incompletely defined input data.	5		v		v	v	
9.	Intelligent machine vision systems	The purpose of the discipline is aimed at the formation of a complex of knowledge, skills and abilities in the field of application of modern methods of image processing and analysis and the construction of software complexes and systems for intelligent processing of digital graphics. Contents: mastering the main directions of development of applied research in the field of digital image processing; studying methods for searching for special points in images; studying the main image processing software libraries; mastering methods for solving practical problems of digital image processing.	5		v		v	v	

10	To design advanced humanoid robots	As part of the course, the doctoral student acquires practical skills in the development and design of robots in a computer environment. Basic knowledge and skills in computer science, programming and mathematics are offered. At the end of the course, the doctoral student must demonstrate the ability to analyze, design and develop special-purpose robots.	5	v	v	v			
11	Designing mechatronic systems on Matlab/Simulink	The purpose of teaching the discipline is a practical study of the means and methods used in the simulation of technical systems, systematization and integration of previously acquired knowledge in the professional disciplines of master's training in relation to the tasks of designing mechatronic and robotic systems for special purposes. In this course it is supposed to acquaint doctoral students with modern methods of imitational and mathematical modeling of complex systems, paying special attention to methods created on the basis of artificial intelligence.	5		v			v	

2025-2026 (Autumn, Spring)
